# Nebraska Platte-Republican Resources Area CREP

Annual Performance Report

For the period:  
October 1, 2012, to September 30, 2013

This performance report is submitted to fulfill the requirements of Section VI., Parts I. And J. of the Memorandum of Agreement (MOA) between the United States Department of Agriculture (USDA), Commodity Credit Corporation (CCC), and the State of Nebraska concerning the implementation of the Nebraska Platte-Republican Resources Area Conservation Reserve Enhancement Program (CREP) signed on March 19, 2005. This report addresses the status of enrollments, level of program participation, the results of the annual monitoring program, non-federal CREP program expenditures, progress on fulfilling other State commitments and recommendations to improve the program.

## INTRODUCTION

The agreement between the USDA, CCC, and the State of Nebraska initiated the Nebraska Platte-Republican Resources Area CREP for the improvement of water quantity and quality, and the enhancement of wildlife habitat in designated areas of the Platte and Republican River Basins. The MOA was signed by Floyd D. Gabler, Deputy Under Secretary for Farm and Foreign Agricultural Services for the USDA and Nebraska Governor Dave Heineman on March 19, 2005.

The Nebraska Platte-Republican Resources Area CREP is a cooperative effort between the USDA Farm Services Agency (FSA), the Natural Resources Conservation Service (NRCS), and the State of Nebraska. The CREP is part of the Conservation Reserve Program (CRP), operated by FSA for the CCC.

The overall goals of the Nebraska Platte-Republican Resources Area CREP are to significantly reduce the amount of irrigation water consumptive use, and agricultural chemicals and sediment entering waters of the State from agricultural lands and transportation corridors. The reduction of ground and surface water use and of non-point source contaminants, through establishment of permanent vegetative cover, will also enhance associated wildlife habitat, both terrestrial and aquatic. These goals are to be accomplished by terminating all irrigation practices on 100,000 acres of land located in the State Conservation Priority Area for Water Quality (the "Priority Area"). The Priority Area includes land adjacent to the Republican River and the Platte River and their tributaries. Appendix A identifies these specific geographic areas.

In addition to not irrigating the land enrolled in CREP, the following conservation practices will be implemented on the land.

- Up to 85,000 acres of CP2, CP4D, CP12 and CP25 (Establishment of Permanent Native Grasses, Permanent Wildlife Habitat, Wildlife Food Plots, and rare and declining habitat)
- Up to 10,000 acres of CP21 and CP22 (Filter Strips and Riparian Buffers)
- Up to 5,000 acres of CP23 and CP23A (Wetland Restoration, and Wetland Restoration, Non-Floodplain.)

On February 17, 2006, the first amendment to the Platte-Republican CREP MOA was signed into effect. This amendment opened up enrollment between the two basins. Previously, there was a 50,000 acre limit for each of the Platte and Republican River Basins respectively. Now the 100,000 acres may be anywhere with one exception. Above Lake McConaughy there is a 5,000 acre cap on lands served by surface water or a combination of surface water and groundwater.

On December 21, 2007, the second amendment to the Platte-Republican CREP MOA was signed into effect. This amendment removed references to a statutory ending date for CRP enrollments and stated that the CREP agreement would not terminate automatically on December 31, 2007, so long as statutory authority existed for such enrollments. The amendment stated the parties may terminate the CREP Agreement at will, to the extent provided for in the original agreement. Congress extended the date for signup.

In September 2011, amendment number three was signed. This amendment expanded the area subject to CREP in the Platte River Basin. The increase included lands near the South Platte River and Lodgepole Creek and lands near Pumpkinseed (Pumpkin) Creek in Banner County. Along the North Platte and Platte Rivers, the area was extended to the boundaries of the area designated as over appropriated pursuant to the Nebraska Groundwater Management and Protection Act. The changes are shown in Appendix A. The amendment also allowed individual farmers who are enrolled in CREP to, during the term of the CREP water use contract, enter into agreements with other entities that result in permanent retirement of acres from irrigation, following the expiration date of the CREP contracts. An additional eligible practice was added, CP12 for wildlife food plots.

There were no amendments to the program during the current reporting period.

The Platte-Republican Resources Area CREP was promoted during a series of “Permitting Workshops” held in May 2013, by the Department in Republican River Basin communities. A total of 3 workshops were held in the cities of Franklin, Arapahoe, and McCook. Department staff were available to answer questions concerning CREP and distributed literature to potential conservationists. In addition, a booth was staffed by Department of Natural Resources employees in the natural resources pavilion at the annual Husker Harvest Days in Grand Island, Nebraska. The 2013 event was held on September 9, 10, and 11. Staff provided informational brochures and answered questions about the CREP. Husker Harvest Days is billed on the event’s website as: “Today’s Husker Harvest Days is recognized as the World’s Largest Totally Irrigated Working Farm Show™” and features the most extensive state-of-the-art information and technology available for

today’s agricultural producers”. Attendance was in the tens of thousands and most attendees are the irrigated agricultural producers whom the program is targeting.

**STEERING COMMITTEE**

A committee was formed to offer guidance on the program. The committee includes staff from the participating federal, state, and local agencies and congressional and senate offices. A list of the current steering committee is presented in Appendix E. The steering committee meets to discuss ideas for increasing participation in the program and any needed changes to the program. Topics included additional incentive payments, advertising, changing the rates. A meeting was conducted at the beginning of the reporting period, in December 2012, to discuss promotion of the program and, in particular, the wildlife enhancing practices that are now available. CRP training opportunities for field staff was also discussed.

**LEVEL OF PROGRAM PARTICIPATION**

From April 4, 2005, until September 30, 2013, there were 705 applications for participation filed, with most of those being received in 2005. From October 1, 2012, until September 30, 2013, there were six new applications filed. As of September 30, 2013, there are 506 active contracts. Two breakdowns of the 506 contracts are presented below in Tables 1 and 2. At the end of this report are appendices, which include a complete listing of the 506 contracts (Appendix B), a listing of the contracts by County (Appendix F), a listing of contracts by Natural Resources District (NRD) (Appendix G), and a listing by irrigation district (Appendix H). Included in the 46,636.60 acres contracted under the FSA practices CP2, CP4D, CP12 and CP25, described in detail in this report, there are 5.1 acres offered under FSA practice CP21.

## **ANNUAL WATER SAVINGS**

The Nebraska Department of Natural Resources analyzed 506 contracts and the 45,240.12 irrigated acres that were fully enrolled into the program as of September 30, 2013, to determine the total savings in water based on consumptive use as shown in Table 3. Acres that are irrigated by both groundwater and surface water are described as commingled acres when discussed in this report. It is important to remember that in the program areas, groundwater is hydrologically connected to streams. This means that underground flow of water is a significant source of base flow in Nebraska streams. Therefore, reducing the withdrawal and subsequent consumption of groundwater for irrigation should result in improved stream flow.

Consumptive use calculations for all acres were derived from calculations provided by Derrel Martin, Professor of Biological Systems Engineering at the University of Nebraska. Appendix C identifies the range of the average irrigation requirement to irrigate a full yield corn crop across the state of Nebraska and Appendix D identifies the net average corn crop irrigation requirement (CIR) by county that was developed for the program. The net CIR is the amount of irrigation water consumed when water is applied at a rate that meets the full crop demand.

The location of the land under each of the contracts was analyzed against the net CIR map to determine an average net CIR to be applied in the calculation. The average net CIR was then multiplied by the acres under each individual contract to determine the total savings in consumptive use that resulted from not applying irrigation water. Table 3 indicates the savings that would occur if the full crop irrigation requirement was met. For the purpose of these estimates of consumptive use savings of irrigation water, it is assumed that for those acres irrigated from groundwater (which includes acres identified as commingled) the full irrigation requirement would be met. Therefore the amounts in Table 3 for groundwater irrigated acres and for commingled acres are the actual reported savings with the exceptions described in the paragraphs following Table 3.

**Table 3: CONSUMPTIVE USE SAVINGS FOR 2013 BY RESOURCES AREA**

	Republican Resources Area	Platte Basin Above Lake McConaughy Resources Area	Platte Basin Below Lake McConaughy Resources Area	Totals
<b>Number of Contracts with:</b>				
Groundwater Acres	268	26	27	321
Commingled Acres*	64	8	10	82
Surface Water Acres	73	82	10	165
<b>Number of Acres:</b>				
Groundwater Only	27217.24	2343.40	1405.20	30965.84
Commingled	4430.46	391.90	530.37	5352.73
Surface Water	4345.72	4291.5	286.53	8923.75
<b>Consumptive Use Savings Shown in Acre-feet:</b>				
Groundwater Only	27940.40	2732.10	1391.54	32,064.04
Commingled	4461.73	458.17	541.70	5,461.59
Surface Water	4274.33	5078.09	296.32	9,648.73

\*Some contracts contain groundwater or surface water parcels and commingled parcels

For those acres served only by surface water, further analysis is provided. As indicated above, commingled acres are treated as groundwater acres for the purpose of computing water savings. Due to the amount of time it takes to finalize the records of diversion for the irrigation season, the actual amount of water saved for lands served solely by surface water will be reported one year after the irrigation season. Therefore, this report will include the savings calculated for the 2012 irrigation season for acres irrigated only from surface water.

Although Table 3 indicates the consumptive use savings of lands served solely by surface water, the assumption for the figures presented are based on the lands receiving a supply of water sufficient to meet the full crop irrigation requirement and no other use being made of the water saved. Surface water appropriations (water rights) in Nebraska are statutorily based on the principle that “first in time is first in right”. This means that the older surface water rights are to receive water before newer water rights can be satisfied during times of shortage. The date of the water appropriation is called the priority date, and administering water rights in order of priority results in older rights getting their water before the newer rights when stream flow is in short supply. Tables 4 through 10 summarize the accounting made for the different areas in the state, based upon the available stream flow, and the methods used across the state for protecting the water saved under the contracts. The accounting methods used are customized to reflect legal considerations, physical features, and partnership agreements that differ between river basins.

For those lands that are served from a natural flow appropriation only (directly from a natural stream and not served from reservoir storage water), the Department of Natural Resources required the landowner (and the appropriator of record if not the landowner) to file a temporary transfer to change the consumptive use portion of the appropriation attached to the contracted lands to an appropriation for instream use. A summary of the transfers is shown in Table 4. The

Department then protects the water in the stream from other diversions as long as such appropriation is in priority as compared to other appropriations. During 2012, much of Nebraska suffered from extreme to exceptional drought conditions, impacting agriculture and hydrology in the Republican and Platte River Basins. As a result, transferred water rights that are more junior in priority, in some cases, were unable to be protected from the point of diversion of the original water appropriation to the Nebraska/Kansas border in the Republican Basin, and to the mouth of the Platte in the Platte Basin.

In determining the amounts that could be transferred to the instream appropriations, the Department used the CIR calculations discussed above, but distributed them throughout the irrigation season. For commingled acres, for the purpose of determining the amount to be transferred to instream appropriations, it will be assumed that 50 percent of the consumptive use was from groundwater. The non-consumptive use portion of the appropriation was allowed to be diverted by canals for use as carriage water in the canals, but could not be used for irrigation. For other types of surface water diversion facilities, such as pumps, the non-consumptive use portion of the appropriation cannot be diverted by the contractor and remains in the stream where it may be diverted by other downstream users. The Department required these conditions to alleviate harm to other users.

Table 4 describes the amount of water that is protected in the river on the basis of priority of appropriation for those lands under contract that are served by natural flow surface water.

**Table 4: STREAM AUGMENTATION PERMITS FOR 2012 BY RESOURCES AREA**

BASIN	NUMBER OF TRANSFERS	INSTREAM FLOW AMOUNTS*		
		June	July	August
Platte Basin Above McConaughy	3	0.02	.70	0.03
Platte Basin Below McConaughy	2	0.00	0.39	0.00
Republican River Basin	37	3.63	7.80	4.50

\*In Cubic Feet Per Second

As a comparison, the Department used the same method for determining consumptive use described above for the contracts that required transfers to determine the amount of savings that occurred. However, no consumptive use savings will be counted when the appropriations are out of priority for the majority of the season (greater than 50 percent of the time), or when the lands under the contracts are also irrigated from groundwater. (The savings for commingled lands is shown in Table 3.) Tables 5, 6, and 7 describe the calculated consumptive use saved because of the CREP contracts for the three resource areas for those lands under contract that are served only by natural flow surface water appropriations and where transfers were required. Three contractors included more acres in the transfers than were contracted for in CREP. The savings for those acres were not included in the calculations summarized in Tables 5, 6, and 7.

\*Savings for commingled acres not computed here are computed with the groundwater acres

In the Republican River Basin, for lands served both from a natural flow appropriation (usually held in the name of an irrigation district) and from a storage use appropriation held in the name of the U.S. Bureau of Reclamation (USBR), the Department did not require a temporary transfer to an instream augmentation permit. Rather, an accounting method was agreed upon whereby the water that is not diverted from the reservoir for use on lands under the contracts is accounted for as being saved in the reservoir until such time as the total reservoir contents reach a target level determined by the Nebraska Game and Parks Commission to maintain the fishery. A copy of the document explaining the calculations is located in Appendix I. If the target level is reached, the account is reset at zero.

Water year 2012 marked the first time since 2006 that desirable target elevations (relative to reservoir storage) were not met at all basin reservoirs. Although water administration reduced the supply of available water, CREP “savings” from diversions forgone can be accounted for from Swanson & Harry Strunk Reservoirs. No specific storage savings of program water are attributable to Enders & Harlan County Reservoirs due to desirable target levels continuing to be met and the curtailment irrigation releases.

No irrigation releases were made from Hugh Butler Lake in 2012 and the pool level continued to be maintained near the dead pool to reduce risk related to embankment cracking discovered in 2009. There was an ongoing construction rehabilitation project to bring the structure of the dam up to safety standards. The project was completed too late for the 2012 irrigation season.

No irrigation releases were made from Enders Reservoir and therefore no savings were realized. The elevation on September 30, 2012 was 3093.21 feet, exceeding the Desirable Target Elevation (DTE) of 3089.40 feet. The end of year reservoir storage was 15,200 acre feet.

Harlan County Lake stored 197,500 acre-feet on September 30, 2012, exceeding the DTE relative to storage of 118,099 acre-feet.

Reservoir storage at Swanson Lake, near Trenton, was measured at 60,800 acre feet to begin water year 2012, exceeding the desirable target level of 45,211 acre-feet. However, by the end of water year 2012, storage had fallen below target levels to 39,000 acre-feet. Therefore, CREP savings can be accrued for the 1780.17 acres of CREP contracts, covered by surface water only, on the Meeker Drift Wood Canal and 15 acres of surface water only CREP contracts on land served by the Bartley Canal.

Water levels at Harry Strunk Lake began water year 2012 at 25,300 acre-feet, but declined to 13,900 acre-feet by years end, due to irrigation releases via the Cambridge Canal. Reservoir levels remained below desirable target storage of 19,631 acre-feet until the end of December 2012. Program water savings in Harry Strunk Reservoir can be accrued for 2012, however, there will be no carryover into 2013 as increased storage levels triggered the account to be reset. In 2012, there were 251.5 acres of CREP located on land served by the Cambridge Canal for which savings can be accounted.

An analysis of water diversion forgone due to CREP is provided in Table 7A.

**Table 7A: ANALYSIS OF WATER SAVED IN 2012 UNDER CREP CONTRACTS  
HAVING LANDS SERVED BY SURFACE WATER ONLY  
IN THE AREA SERVED BY RESERVOIRS LOCATED IN REPUBLICAN RIVER BASIN**

<b>Reservoir Name</b>	<b>Swanson</b>	<b>Swanson</b>	<b>Harry Strunk</b>
Irrigation District	Frenchman Cambridge	Frenchman Cambridge	Frenchman Cambridge
Canal Name	Meeker-Driftwood Canal	Bartley Canal	Cambridge Canal
CREP SW Only Acres:	1780.17	15.00	251.50
Average Storage Water Delivery (in acre-feet per acre)	.856	.775	.867
Return as decimal percentage of canal diversion*	.63	.56	.52
Consumptive Use as percentage of diversion**	(1 - .63)	(1 - .56)	(1-.52)
Canal Diversion Forgone (in acre-feet)	563.82	5.12	104.67
Total Storage Water Diversion Forgone For Water Year 2012 (in acre-feet):			673.61

\*Return as percentage of canal diversion estimated from Republican River Compact Attachment 7 for water year 2012

\*\* Consumptive use calculation from accounting rules Appendix J in CREP Memorandum of Agreement

There is no claim for savings of the natural flow appropriations attached to these lands because water not used on irrigation district lands would be available for use by another appropriator or available for storage in the reservoirs and does not have to be protected through a transfer to instream use.

In 2012, the Republican River Basin water supply available for irrigation was diminished from previous years due to prolonged drought. In turn, Republican River Basin reservoirs were unable to provide a full CIR allocation to producers served by irrigation district canals. Thus, CREP savings shown above reflect estimated actual delivery instead of a full CIR allocation. The above normal summer temperatures and dry conditions, which increased crop water needs, were a drastic reversal from 2011, which saw a plentiful water supply in Harlan County Lake that was in flood pool for much of the year and necessitated prolonged releases from the dam.

The benefits from curtailment of irrigation on the program acres continue to assist the state and local governments in their efforts to implement long term balance between supply and demand for surface water and groundwater. The reduction in consumptive use from irrigated acres that are set aside during the water use contract period are an important component of Nebraska's integrated management of hydrologically connected surface water and ground water.

Likewise in the Platte River Basin, for lands served from a storage use appropriation from Lake McConaughy held in the name of The Central Nebraska Public Power and Irrigation

District or Nebraska Public Power District, there is an agreement for accounting in the reservoir for the water not consumed by the contracted lands. The agreement describes how the calculations are to be made and includes a target level, that when reached, resets any water savings in the reservoir to zero. A copy of the agreement is located in Appendix J. There was no savings accounted for in Lake McConaughy for the 2012 season as the reservoir reached the target level during the year.

As in the Republican River Basin, there was a diminished water supply from previous years in the Platte River Basin. Even though there is a lack of computed reservoir “savings” using the agreed method, the reduction of depletion to stream flow continues as a benefit even in years where trigger levels are reached. This is especially true for curtailment of groundwater irrigation, since the beneficial effect is realized over many years.

For the Districts in the North Platte Basin that are served with storage water from reservoirs located in Wyoming, the amount of water saved is calculated the same as for groundwater, except that if a canal does not supply sufficient water to satisfy the net CIR, a percentage factor is applied based on the percent of CIR delivered. In 2012 the districts supplied a sufficient amount of water to satisfy a full CIR from storage releases.

**Table 8: ANALYSIS OF WATER SAVED IN 2012 UNDER CREP CONTRACTS  
HAVING LANDS SERVED BY SURFACE WATER ONLY  
IN THE AREA SERVED BY RESERVOIRS  
LOCATED IN WYOMING**

<b>Platte River Basin Irrigation District</b>	<b>Number of Contracts</b>	<b>Number of Acres</b>	<b>Consumptive Use In Acre-feet</b>
Bridgeport Irrigation District	5	158.4	184.8
Farmers Irrigation District	7	63.6	74.2
Gering-Fort Laramie Irrigation District	6	182.8	217.84
Northport Irrigation District	13	502.1	585.78
Pathfinder Irrigation District	45	2856.5	3396.93
<b>Total</b>	<b>76</b>	<b>3763.4</b>	<b>4,459.55</b>

The Department of Natural Resources used the prescribed methods of calculating the consumptive use of the surface water savings. Due to dry conditions in 2012, water administration actions were taken when necessary to satisfy senior appropriators. Required administrative regulation was employed in order to minimize negative effects on water users not participating in the program, to help maintain the regime of the river, and to meet state statutes and interstate compacts and decrees. Table 9 summarizes the amount of water savings accounted for in 2012 for lands served only by surface water.

**Table 9: Summary Of Water Saved Under CREP Contracts  
For Lands Served ONLY By Surface Water  
As Of September 30, 2012**

<b>Basin</b>	<b>Consumptive Use in Acre-feet</b>
Platte River above McConaughy	67.24
Platte River below McConaughy	14.70
Republican River	286.66
Storage in Republican Reservoirs	673.10
Storage Water in McConaughy	0.00
Lands served by Wyoming Reservoirs	4459.55
<b>Total</b>	<b>5,501.25</b>

As mentioned earlier in this report, the requisite surface water information is not available by the deadline for submitting the annual performance report for this CREP program. Therefore, the following table is created to combine the 2012 groundwater and 2012 surface water consumptive use savings attributable to the program. Taking all the above information regarding the amount of water saved in 2012 from CREP contracts for lands served solely by surface water, and taking the amount of savings shown in the 2012 CREP report for lands served solely by groundwater or served both by groundwater and surface water (commingled), gives us a total water savings of water for 2012 as shown in Table 10.

**Table 10: CONSUMPTIVE USE SAVINGS FOR 2012 BY RESOURCES AREA**

	<b>Republican Resources Area</b>	<b>Platte Basin Above Lake McConaughy Resources Area</b>	<b>Platte Basin Below Lake McConaughy Resources Area</b>	<b>Totals</b>
<b>Number of Contracts with:</b>				
Groundwater Acres	275	26	27	328
Commingled Acres	64	8	10	82
Surface Water Acres	73	82	10	165
<b>Number of Acres:</b>

<b>Total Water Savings in Acre-Feet for CREP in 2012</b>				<b>44,146.34</b>

## **CONTRACT MONITORING**

The Department of Natural Resources and the local natural resources districts cooperated in a monitoring program to assure non-use of water under contract. This monitoring is in addition to monitoring done by the FSA under their CREP requirements. Ten percent of all contracts having surface water appropriations, and ten percent of all contracts with lands served by groundwater were reviewed. The Department's review consisted of field investigations to determine whether lands had been irrigated and whether it was planted to a cover crop. The natural resources districts reported on whether there was any use of water from the wells included under the water use contracts. No violations were found.

## **WATER QUALITY SAVINGS**

One of the goals of the program is to improve surface and groundwater quality by reducing the amount of atrazine, nitrogen and phosphorous applied to the irrigated property. Under the terms of the program, lands included under contract must be replanted to native grasses and, therefore, would not be fertilized. The average amounts of applications associated with each of the three are: (1) atrazine is 1.3 pounds per acre applied; (2) nitrogen is 200 pounds per acre, and (3) phosphorous is 20 pounds per acre. Therefore, Table 11 has been compiled to show the amount of chemicals that likely would have been applied to the contracted acres, had they remained as irrigated cropland.

**Table 11: Water Quality Monitoring**

The 2007 acreage was used for both 2005 and 2006 for purposes of the total accumulation.\*

## REDUCTION OF ENERGY CONSUMPTION

Another goal of the Nebraska Platte-Republican CREP was to reduce the total consumption of fossil fuels by 350,000 gallons and electricity use by 10 million kilowatt hours. The Nebraska Department of Energy’s website includes a table showing irrigation pumps in Nebraska by Fuel for 2008. It indicates that approximately 54 percent of all irrigation pumps are powered by electricity, and 46 percent are powered by fossil fuels. Nebraska Public Power District, one of the Nebraska Platte/Republican CREP partners, provided a spreadsheet created as part of the 2001 Report – “Estimated Irrigation Costs” by Roger Selley, University of Nebraska at Lincoln.

Using this spreadsheet and with the assumptions that the distribution system is a 135 acre center pivot pumping 800 gallons per minute and applying 9.5 acre-inches per acre with a lift of 100 feet at 60 percent efficiency, the annual electric usage is 45,966 kilowatt hours, and fossil fuels (diesel, propane and gasoline) average 4,600 gallons. The formulas used below are (electric consumption = acres x .54 x (46,000 kilowatt hours/135 acres)) and (fossil fuel consumption = acres x .46 x (4,600 gallons/135 acres)).

**Table 12: Estimated Savings on Electricity and Fossil Fuels**

## MONITORING OF WILDLIFE POPULATIONS

Monitoring of wildlife populations in the Platte-Republican Basins CREP area continues to be completed by the Nebraska Game and Parks Commission using standard game surveys. The primary impact on wildlife in the CREP area at this point has been the enrollment of >46,000 acres of formerly cropped irrigated fields into appropriate wildlife cover. The bulk of the CREP acres were enrolled in the spring of 2005 and were planted to perennial cover in the fall of 2005 and spring of 2006. Thus, in looking at the following graphs, the 2005 survey data provides a baseline for detecting changes in populations that can be attributed, at least in part, to the CREP enrollment. Annual variations in wildlife populations are very common, and in Nebraska, are typically tied to weather conditions. Surveyed wildlife populations in the CREP area are compared to those across the state in order to better understand the relative impact of CREP habitat enrollments on Nebraska wildlife populations of interest.

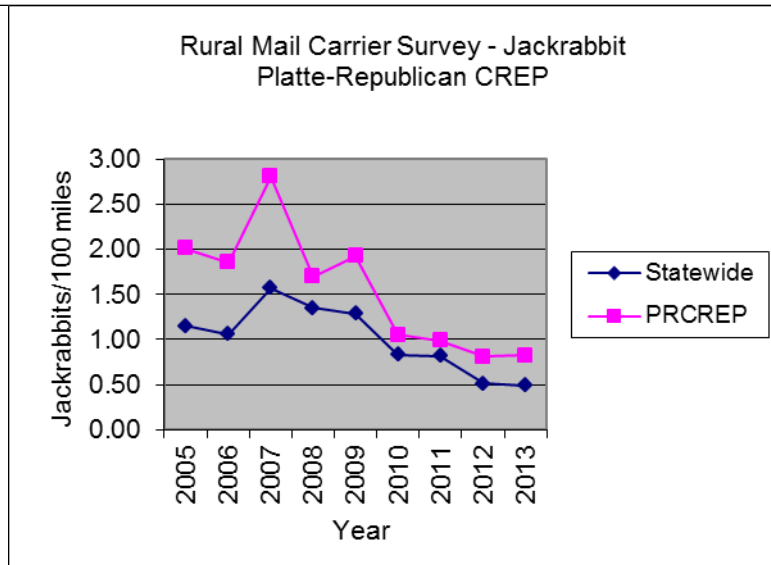

2012 saw Nebraska enter into the worst drought since the 1930's. Conditions improved some in 2013 but much of the western part of the state remained in drought. CRP (which includes CREP fields) tracts were again hayed or grazed in late summer to provide emergency forage for livestock, although to a much lesser extent than in 2012. As of October 2013, much of the area within the PR CREP remains classified as in severe or extreme drought. Wildlife populations should rebound given a return to more normal precipitation in the coming years. If this drought persists it's expected negative trends will continue.

The ring-necked pheasant population in the CREP decreased this year, continuing the downward trend. Factors negatively affecting the populations are continued habitat loss due to high commodity prices and poor chick survival due to the severe drought. Research in the southwest corner of the state showed a late hatch this year. Winter weather and the persistence of the drought will be highly influential on any population rebound because of reduced habitat due to emergency haying and grazing and less than robust stands due to lack of precipitation. Although populations in the CREP decreased, the CREP numbers remained higher than statewide figures. CREP fields contributed valuable winter cover and nesting cover in the area. Hunters continue to find good pheasant numbers in the CREP area.

The Bobwhite Quail Whistle Count Survey indicated the population of breeding birds in the region was lower than statewide for the first time in four years. The Rural Mail Carrier Survey (RMCS) takes place in July, which this year was again hot and dry. Quail numbers remain on a downward trend, most likely due to the continued drought in the region. A return to more normal precipitation patterns and a mild winter would help slow and possibly reverse the trends. Hunters reported frequently finding quail on CREP fields this fall while pheasant hunting. For the first time in 4 years, the Rural Mail Carrier Survey (RMCS) in late summer indicated that the CREP area had lower quail numbers coming into this fall than did the rest of the state. Drought is likely the cause.

The RMCS in late summer for wild turkeys in 2013 showed marked declines in wild turkey numbers. The continued drought likely had a detrimental effect on chick survival. However populations in the area and statewide remain strong. CREP fields provide secure nesting cover for turkeys, and CREP numbers continue to be higher than statewide. Jackrabbit numbers in the CREP area decreased in 2013 but remain above statewide levels.

Cottontail rabbit numbers in the CREP area decreased from last year, similar to what has happened statewide. This decline may be due to the natural cycling of rabbit populations.

Currently, CREP fields are providing high quality wildlife habitat with a diverse mix of grasses, forbs, and legumes. These are providing key grassland habitats which are required for strong pheasant populations. Landowners, hunters, and natural resource enthusiasts continue to report excellent wildlife use of CREP fields. CREP enrollments are contributing to success of these populations, and with appropriate management will continue to do so throughout the life of the CREP contracts.

## SUMMARY OF NON-FEDERAL PROGRAM EXPENDITURES

The State of Nebraska agreed to contribute not less than 20 percent nor more than 50 percent of the overall annual program costs, through cash contributions or in-kind services. The in-kind services include current water conservation activities, water quality activities, and wildlife enhancement activities, in the CREP area within each organization's individual jurisdiction. Table 13 indicates the level of support that various local and state agencies have pledged to the project and the in-kind services they provided during the named fiscal years.

## **PROGRESS ON FULFILLING OTHER PROGRAM COMMITMENTS**

1. Provide cost share payments.

As of September 30, 2013, \$1,861,176 had been expended by the State of Nebraska to meet its portion of the 50 percent cost-share of practice establishment.

2. Pay all cost associated with annual monitoring programs.

The Department of Natural Resources staff investigated ten percent of existing contracts involving surface water during the 2013.

The local natural resources districts also investigated their records of water use for ten percent of existing contracts involving groundwater. No violations were found.

3. Provide wildlife conservation planning for producers on an as-requested basis.

The Nebraska Game and Parks Commission and Pheasants Forever continue to provide wildlife conservation planning assistance for any landowner enrolled, or interested in enrolling, in the Platte-Republican CREP. This is an ongoing commitment from these partners, in that landowners may request assistance for wildlife habitat planning and management before they enroll, while enrolling or after they have already enrolled in CREP.

4. Establish an Enhancement Program Steering Committee.

The Department of Natural Resources has established a CREP Steering Committee. The list of members can be found in Appendix E. The Committee is meeting regularly and has assigned subcommittees to work on specific projects.

5. Provide staffing support for a full-time CREP administrative coordinator.

The Department of Natural Resources has two staff members appointed as CREP coordinators to facilitate and oversee program implementation, coordination, promotional activities, technical assistance, and monitoring and evaluation. Both staff members have other responsibilities in addition to CREP, but the Department Director and other staff members also devote considerable amounts of their time in facilitating CREP and overseeing its implementation. In all 8 staff members were involved in administering the program.

6. Seek applicants willing to participate in CREP.

The Department and partners continue to look at ways to enhance CREP through additional awareness. Subsequent to Amendment 3 to the CREP MOA the partners have worked with local natural resource managers in these expanded areas to increase the program's potential. The focus has been through local and federal offices in the areas eligible for CREP sign-up.

In addition, events such as local workshops and Husker Harvest Days have been utilized to get the word out.

7. Facilitate provision of technical assistance from local conservation districts.

Funding through the Nebraska Soil, Water Conservation Fund and the Nebraska Natural Resources Water Quality Fund and Interrelated Water Management Plan Program Fund was provided to the local conservation districts to aid in delivering technical assistance.

8. Implement a broad campaign for continuous public information and education regarding the CREP.

The Department of Natural Resources, the FSA and the local natural resources districts continue to inform and educate the public about the program. A media program was implemented for the signing of the third amendment to the MOA. Information is available online and continues to be refined and expanded. Events will continue to be staffed with CREP promoters and educational materials. County service center staff are being trained and reminded to look for situations where the program would be of interest to their clients.

9. Work to ensure coordination with other agricultural conservation programs is included on the CREP Steering Committee.

Dialog between these agencies continues through the Platte-Republican Resources Area CREP sign-up process. The committee has a broad base of membership and each member serves to bring their focus interests to the discussion and informs their constituency. Ongoing meetings with partners and program administrators will enable the program to remain a recognized option for long term farm management.

10. Enter into a Water Use Contract with every CREP participant.

The Department of Natural Resources is currently maintaining 506 active Water Use Contracts.

11. Take all reasonable steps to ensure water savings achieved by Water Use Contracts shall be used for environmental and public recreational purposes in a stream, river, aquifer, or reservoir.

The Department of Natural Resources required all applicants whose irrigation water could not be saved in a storage reservoir or underground aquifer to seek a transfer to instream use to meet the objectives of CREP. Agreements between the United States Bureau of Reclamation and the Central Nebraska Public Power and Irrigation District allow for the storage of water saved by forgoing irrigation on acres that have been enrolled in CREP.

12. Take all reasonable steps to enforce the requirements of the Water Use Contracts.

The Department and the natural resources districts continue to monitor water use on lands signed under CREP contracts. Many amendments to contracts have also occurred because of the sale of land, or differences in measurements. Field inspections serve to verify the land has adequate cover and is being managed according to contract and is not being irrigated.

13. Seek the approval of this agreement with such independent boards or bodies within the State as may be necessary or appropriate to maximize objectives of CREP.

The Department of Natural Resources continues to work with all affected irrigation districts, natural resources districts and water storage reservoir owners to ensure that water savings achieved by CREP would be stored or transferred to maximize the objectives of CREP.

### **RECOMMENDATIONS FOR PROGRAM IMPROVEMENT**

Following the initial phenomenal rate of sign up to participation in the Nebraska Platte-Republican Resources Area CREP, there continues to be a low level of new sign-ups. Some of the inactivity is due to restrictions and limits in the program as compared to other available programs. The third amendment to the Platte-Republican Resources Area CREP MOA has addressed some of the issues that reduced interest in the program. The improvements include expanding the eligible area, updating the soil rental rates to better reflect the current agricultural economy and adding or modifying the eligible practices. The rates per acre are determined by the Conservation Environmental Program Division of the Farm Service Agency in Washington, D.C. Recent agricultural economic conditions have made this a challenging task.

The CREP is a long-term continuous sign-up program. The amendment 3 improvements have been in effect since September 6, 2011. The robust farm economy and significant increases in land sales have had an impact on the rate of sign-up for this program. Commodity rates have moderated, but land sale/rental prices have not moderated to the same extent, so it is too early to determine the impact of reduced commodity values on the sign-up rate. The market influences have traditionally been cyclical, so there may be a commensurate reduction in per acre rental and land sale rates. The FSA has raised the cash rental rate basis for CREP payments in an attempt to keep up with the prosperous agricultural economy. This should help increase sign-up for the 2014 fiscal year, assuming funding through the proposed farm bill will continue to be available.

The initial sign-up program was begun at the end of a droughty period. The year 2012 summer saw a return to drought in Nebraska and neighboring states. Generally speaking, dry conditions continued through 2013, so it is still plausible that enrollment will see an increase. It is a way to diversify and protect against risks associated with continued adverse weather patterns. This opportunity for landowners to diversify their income base will be a topic that continues to be stressed by federal, state and local partners and staff. The environmental benefits should continue to be touted in addition to the reductions in consumptive use of irrigation water. The evidence of improved wildlife conditions on project lands should also be promoted.

Web based information that is geared toward potential participants will be posted and the links to the information will be distributed to program partners. Other media informational opportunities will be investigated. Small public information messages can be distributed to broadcast and print media in the program areas.

There is still a need to reduce water use, during certain periods, to meet interstate compact requirements or interstate agreements in both the Republican and the Platte Basins. We are investigating and working with the partners to find new incentives and new partnerships. Along with the changes brought with the signing of the third amendment to the MOA, there is the option for local natural resources districts to enter into permanent conservation easements that initiate at the completion of the CREP contract period. This additional monetary incentive provides another option for landowners and the organizations involved in achieving the goals of interstate agreements and integrated management planning.

## **SUMMARY**

The Platte-Republican Resources Area CREP continues to provide the benefits intended from its inception. The most recently completed annual computations of surface water and groundwater savings indicate the reduction of consumptive use of water is greater than 44,000 acre-feet. This reduction of water consumption is making a significant contribution to the goals of this program and those of the state and local water management partners where reduction in stream flow depletions is necessary. The improvements to streamflow are particularly important now that we have gone into drought. Enhanced stream flow has water quality benefits too. The reduction in use of millions of pounds of herbicide and fertilizer continues to improve water quality. The wildlife surveys demonstrate that the ground cover that is planted under this program is successfully providing good habitat for numerous species. An added benefit is the annual savings of over 8 million kilowatt-hours and over 700,000 gallons of fossil fuel. This provides additional environmental benefits. Significantly, the booming farm economy has only reduced program enrollment by less than two percent. Economic forecasts predicted the current agricultural economic bubble will significantly moderate in the next 2-4 years. We may have seen the beginning of this moderation already. Increases to the cash rental rate payment basis, stress from the drought and moderation of commodity markets should provide for increased participation in the near future. Educational and promotional opportunities will be utilized to ensure the program is recognized as a useful portfolio option. The program is providing benefits commensurate with the level of participation and should be continued.

# APPENDIX C

## Net Consumptive Irrigation Requirement (NCIR)

## **APPENDIX E**

### **CREP Steering Committee Members**

#### **FSA State Committee:**

##### **Farm Service Agency (FSA):**

-Dan Steinkruger                      -Lavaine Moore  
-Greg Reisdorff

##### **Natural Resources Conservation Service (NRCS):**

-Michael Kucera                      -Ritch Nelson

##### **Nebraska Department of Natural Resources (NDNR):**

-Brian Dunnigan                      -Bob Bettger  
-Mike Thompson                      -Curt Inbody

##### **Nebraska Department of Environmental Quality (NDEQ):**

-Elbert Traylor

##### **Nebraska Game and Parks Commission (NGPC):**

-Tim McCoy                              -Keith Koupal

##### **Nebraska Department of Agriculture (NDA):**

-Bobbie Kriz-Wickham

##### **Agriculture Groups:**

-Jordan Dux (Farm Bureau)  
-Pete Berthelsen (Pheasants Forever)

##### **Local Governments:**

-Dan Smith (MRNRD)	-Glen Bowers (TPNRD)	-Ron Cacek (NPNRD)
-Milt Moravek (CPNRD)	-John Thorburn (TBNRD)	-Kent Miller (TPNRD)
-Mike Clements (LRNRD)	-Rod Horn (SPNRD)	-Jasper Fanning (URNRD)
-Patrick O'Brien (NRD/DEQ Liaison)		

##### **Irrigation and Power:**

-Marsha Trompke (CNPPID)		
-Brian Barels (NPPD)	-Dennis Strauch (Pathfinder)	-Mike Delka (Bostwick)

##### **Congress / Senate:**

-Philip Erdman (Johanns)	-Deb VanMatre (Smith)
-Dayle Williamson (Nelson)	

OPERATING BY-LAWS  
FOR  
THE NEBRASKA PLATTE-REPUBLICAN CONSERVATION RESERVE ENHANCEMENT PROGRAM  
(CREP)  
STEERING COMMITTEE

NOVEMBER 2009

**PURPOSE**

The Nebraska Platte-Republican Conservation Reserve Enhancement Program (CREP) Steering Committee (Committee) is formed to meet the requirements of the Memorandum of Agreement (MOA) between the State of Nebraska and the United States Department of Agriculture (USDA, Commodity Credit Corporation (CCC) to implement the Nebraska Platte-Republican Conservation Reserve Enhancement Program. The Steering Committee is to advise the Nebraska Governor's office on the implementation of this CREP.

**STRUCTURE AND COMPOSITION OF THE COMMITTEE**

The MOA currently states that the Steering Committee "will include representatives from the State technical Committee, FSA, Nebraska Department of Natural Resources, Nebraska Game and Parks Commission, Nebraska Department of Agriculture, NRCS, agriculture and conservation groups and local governments." The following organizations shall be recognized as voting members of the Committee:

FSA:	4 Members
Nebraska Department of Natural Resources:	4 Members
Natural Resources Conservation Service:	2 Members
Nebraska Game and Parks Commission:	2 Members
Nebraska Department of Agriculture:	1 Member
Nebraska Department of Environmental Quality	1 Member
Agriculture Groups (Includes Irrigation And Power Groups):	5 Members
Conservation Groups:	1 Member
Local Governments:	9 Members
TOTAL	29 Members

2013 CREP Performance Report  
December 2013

In addition, staff of Nebraska's congressional and senatorial representatives, the Chairman of the State Technical Committee, and the Governor's Policy Research Office shall be invited to each meeting, but shall be a non-voting member.

A staff member of the Department of Natural Resources and a staff member of the U.S.D.A. Farm Service Agency shall co-chair the committee. If both are unable to attend a scheduled meeting, they shall appoint an acting chair. A staff member of the Department of Natural Resources shall act as the Secretary.

Alternates may be appointed from any representative group. To be able to participate in a vote, the alternate shall present to a Co-Chair a letter from his/her organization saying they are to represent their organization at a specific meeting or the organization can file a letter with the Committee stating who their alternate(s) will be at future meetings.

**RESPONSIBILITIES AND ROLES OF INDIVIDUAL COMMITTEE MEMBERS**

Each member of the Steering Committee is expected to:

- (a) Regularly attend and prepare for work sessions;
- (b) Keep the other members of his or her group informed of what is being discussed by the Committee and solicit their input on these issues
- (c) Clearly articulate and represent the interests of his/her group;
- (d) Listen to other points of view and try to understand the interests of others;
- (e) Openly discuss issues and participate in cooperative problem solving procedure to resolve differences;
- (f) Be responsible for meeting expenses (travel, per diem) per your entities reimbursement policies and procedures.

**RESPONSIBILITIES OF COMMITTEE AS A WHOLE**

The Committee as a whole will make recommendations to the Governor regarding:

- (a) Changes needed to the MOA, and
- (b) Changes needed to the Farm Bill.

The Committee as a whole will review and/or make recommendations to the Department of Natural Resources regarding:

- (a) Changes to the Water Use Contract,
- (b) Opportunities for enhancing the program,
- (c) Public Information

**MEETINGS**

The Committee shall meet at least twice a year, with one meeting possibly being a videoconferencing meeting. The Co-Chairs may schedule additional meetings at any time that there are issues that need to be discussed. Committee members or the public may request of the Co-Chairs that additional meetings be held. Through electronic mail, the Secretary shall make a good

faith effort to arrange a mutually agreeable date, time and place for all meetings.

#### **NOTICE OF MEETINGS**

Official notice of meetings shall be provided electronically to all Committee members through electronic mail at least two weeks prior to the meeting. Notice shall be provided to the public by notice on the Department of Natural Resources' website at least two weeks prior to the meeting. A copy of the proposed agenda shall be included with the Notice, but as allowed under the Open Meetings Act, the agenda can change up until 24 hours before the meeting. Copies of documents that are proposed to be reviewed for action shall also be available on the website and distributed to Committee members through electronic mail at the time of notice. This does not mean that additional documents used for informational purposes cannot be distributed at the meeting. Amended documents being reviewed for action can also be distributed as long as they were available on the website 24 hours before the meeting.

#### **DECISION MAKING**

The purpose of the Committee is to advise the Governor, and thus the Department of Natural Resources, the agency that works directly for the Governor to implement the program. There may at times be differing opinions because of the wide range of interests represented on the Committee.

The Committee must operate under the Open Meetings Act (Neb. Rev. Stat. Chapter 84, Article 14). In order for the Committee to convene, there must be a quorum present. For purposes of this Committee, a quorum shall mean that there are more than 50 percent of the members present (15 members must be present.) Members who are monitoring through telephonic means shall not be counted as present and shall not be allowed to vote.

Roll call votes shall be taken and recorded on all matters. The minutes shall reflect how each member voted or whether they abstained. Prior to any vote, sufficient discussion shall be held to allow all members to understand the issues. Approval or disapproval of any motion shall be by simple majority.

#### **PUBLIC PARTICIPATION**

All meetings shall be open to the public. There shall be a place on the agenda for public comment. Other public participation throughout the meeting will be at the discretion of the Committee.

#### **MINUTES OF MEETINGS**

Draft minutes of the meeting shall be available on the Department of Natural Resources' website and sent through electronic mail to all Committee members within 10 days of the meeting or prior to the next convened meeting, whichever occurs earlier. Following final approval of the minutes, the CREP Coordinator(s) shall maintain the minutes in the CREP files, have it posted

on the Department of Natural Resources' website, and send a copy by electronic mail to the Committee members.

**POWERS AND AUTHORITIES OF THE COMMITTEE**

The Committee shall have the authority to:

- (a) Form subcommittees
- (b) Enact rules that will further describe the procedures to be used by the Committee and subcommittees as long as such rules are not in conflict with existing local, state, or federal rules and regulations and the Operating By-Laws.

**AMENDMENTS TO OPERATING BY-LAWS**

Amendments to these Operating By-Laws can only be made upon the agreement and signature of two thirds of those present at a meeting.

## APPENDIX I

### Republican Basin CREP Accounting Procedures

The basic premise for the Platte-Republican Conservation Reserve Enhancement Program (CREP) is to improve water quantity and quality, enhance wildlife habitat, reduce irrigation water consumptive use and reduce agricultural chemical and sediment runoff by retiring existing water uses for a period of ten to fifteen years. The retirement of existing water uses must not cause harm to existing water rights users. It is our task to protect and/or store only the consumptive use portion of the of the water right enrolled in CREP and in turn maintain return flows in proper timing and amount.

#### Natural Flow Only Permits (Non Project Water)

- 1) Protected by natural flow transfer permit
- 2) Transferred permit retains same priority date
- 3) According to Nebraska Law, if the transferred permit is senior to a storage reservoir, the transferred permit water would be passed through the reservoir. If the transferred permit is junior to a storage reservoir, it could be stored in the reservoir.

#### Storage Permits (Project Water)

- 1) Calculate the amount of estimated water supply for each acre assuming no CREP.
- 2) Calculate CREP Water saved due to diversions foregone.

$(\text{CREP Acres}) \times (\text{Estimated Delivery per Acre}) \times (\% \text{ Consumptive Use}) = \text{CREP Water (Consumptive Use Portion)}$

- 3) Calculate amount of water not consumed due to diversions forgone by CREP contract.

$(\text{Estimated Total Release}) - (\text{CREP Water}) = \text{Total Water Available for Diversion}$

- 4) The amount of CREP Water (Consumptive Use Portion) will remain in the reservoir as “CREP Water” as long as the total reservoir contents are below the reservoirs target level as determined by the Nebraska Game and Parks Commission to maintain the fishery.

#### Desirable Target Elevations - NE Game & Parks Co.

Reservoir Name	Elevation	Content - AF
Enders	3,089.40	14,009
Swanson	2,735.00	45,211
Hugh Butler*	2,570.00	19,901
Harry Strunk	2,355.00	19,631
Harlan County	1,927.00	118,099

- 5) The CREP savings will be credited to a CREP storage account for each lake having CREP savings on September 30<sup>th</sup> of the year that it was accrued. The CREP Storage Account will be charged evaporation and seepage losses in proportion to the amount of water in the CREP account in proportion to the total amount of water in the lake that has savings due to CREP.
- 6) If at any time during the year the elevation of each lake having CREP storage savings reaches the trigger level elevation as identified in the Platte-Republican CREP Memorandum of Agreement (MOA), then the CREP Account will be reset to zero. When the elevation of any lake identified in the Platte-Republican CREP MOA falls below the target, CREP Water Savings will accrue when diversions are made.

## **Accounting Notes:**

- Consumptive Use shall be defined as  $1 - \text{Return Flow as percent (\%)} of canal diversion as computed in the Republican River Compact Agreement annual accounting procedures, Attachment 7. The most recent computations for each canal will be used to calculate consumptive use.$
- Evaporation is to be calculated monthly
- Monthly evaporation charged to the CREP account will be totaled for the year.
- Evaporation charged to the CREP account is to be proportionate to the amount of CREP Water in relation to total amount of water in the reservoir
- CREP accounting is to be completed by December 1<sup>st</sup> each year
- The Bureau of Reclamation will make a good faith effort to avoid releasing any CREP water during the year.
- \*Hugh Butler Lake elevation is being maintained near the dead pool to reduce risk related to embankment cracking discovered in late 2009. The reservoir storage has been evacuated and no irrigation releases will be made until the dam has been repaired. Due to the current condition for the purposes of this report the reservoir is considered to be operationally full and no net savings of CREP water can be realized.

## **APPENDIX J**

### **Accounting for CREP Water Stored in Lake McConaughy**

#### **MEMORANDUM OF AGREEMENT**

between  
Nebraska Department of Natural Resources  
and  
The Central Nebraska Public Power and Irrigation District  
regarding  
Accounting for CREP Water Stored in Lake McConaughy

This Memorandum of Agreement is entered into by the State of Nebraska, Department of Natural Resources (NDNR), 301 Centennial Mall South, P.O. Box 94676, Lincoln, NE 68509 and The Central Nebraska Public Power and Irrigation District (CNPPID), 415 Lincoln Street, P.O. Box 740, Holdrege, NE 68949 on this 17th day of October, 2006.

WHEREAS, the State of Nebraska and the United States Department of Agriculture have implemented a joint program known as the Platte-Republican Resources Area Conservation Reserve Enhancement Program (CREP) whose purposes are to enhance wildlife habitat in Nebraska and to improve water quality and quantity; and

WHEREAS, the CREP program requires the State of Nebraska to, among other things, reduce the consumptive use of water for crop irrigation and increase the amount of water within reservoirs in the CREP priority area; and

WHEREAS, the CNPPID owns and operates Lake McConaughy, a large reservoir within the CREP priority area that stores water appropriated for irrigation use, including water appropriated to farmers who have enrolled in CREP; and

WHEREAS, the CNPPID desires to cooperate with the State of Nebraska and assist the State with its efforts to enhance wildlife habitat and improve water quantity and quality in the State through the CREP program by accounting for water stored in Lake McConaughy due to participation in the CREP program.

NOW THEREFORE, the parties hereby agree that water stored in Lake McConaughy that can be attributed to the CREP program will be accounted for as follows:

1. CNPPID agrees to limit the use of a quantity of water in Lake McConaughy in accordance with the procedures and formulae described below in order to account for the reduction in water used by customers of the canals and irrigation districts below Lake McConaughy on lands served by storage water or served by a combination of storage and natural flow who are enrolled in CREP. This quantity of water shall be referred to as "CREP water."
2. The water shall be considered CREP water as long as no more than a total of 2,000 acres of land irrigated by storage water from CNPPID's Lake McConaughy are enrolled in CREP in any given year. If more than this amount is enrolled in CREP, a different accounting system will be developed if determined to be necessary by CNPPID.

3. If the appropriation enrolled in CREP did not receive an instream use transfer, the formula for quantifying the CREP water shall be:

((Cumulative total irrigation diversion in the storage use time period x (1- transportation loss) x (1 - application loss)) / number of acres under the canal water right) x CREP acres = water saved by CREP in Lake McConaughy, by canal

WHERE:

- a. Storage use time period = any day in which storage water was diverted at the headgate of each canal. CNPPID and NDNR, (and following consultation with the Nebraska Public Power District (NPPD) in those cases involving NPPD canals or their contract canals), will agree which of these periods will be included in the cumulative total diversion in the formula.
  - b. Transportation loss = loss between diversion at the canal Headgate on the river and delivery to the field which is assumed to be 50%
  - c. Application loss = assumed efficiency of the field application for the CREP acres which is assumed to be 50%
4. If the appropriation enrolled in CREP received an instream use transfer, the formula for quantifying the CREP water in Lake McConaughy shall be the same as #3 above but the amount of water transferred to an instream use will be subtracted from this calculation. NDNR and CNPPID must mutually determine that this formula should be applied and if agreement is not reached, no water will be credited to Lake McConaughy from these CREP acres.
5. There may be periods (one or more days) during the summer that contractual limitations preclude CREP from saving water or wet periods that prevent natural flow from being saved. CNPPID will gather information about the way in which the weather affected operation of irrigation canals from the operators of the canals and irrigation districts that have Lake McConaughy storage use rights. When the canals have to alter their operating procedures because of the weather conditions described below, the formula in #3 above will not be applied.
- a. The climatic conditions were not dry enough to require that storage water for irrigation be released from McConaughy and diverted by the canal.
  - b. The climatic conditions were so dry that canal operations were planned to not meet the full irrigation demand for the acres under contract to receive surface water.
  - c. The natural flow water conserved by the reduction in consumptive use due to participation in CREP is not used by another canal relying on Lake McConaughy as a source of supply and that canal is not taking storage

water. (Another canal must be able to make use of the conserved natural flow in exchange for reduced storage releases from Lake McConaughy for the benefit to accrue in the Lake.) Examples of when this might occur include when natural flow available exceeds the demands by canals relying on McConaughy or when canals not associated with McConaughy storage are opened from administration. This exception to the use of the formula in #3 will be applied when there is natural flow passing the Platte River at Cozad gage and/or being returned at the Johnson #2 River Return and Kearny Canal is not requesting administration. The record of the most junior natural flow appropriation that is not being regulated will also be used to determine the application of this exception.

6. The maximum water quantified as CREP water from CNPPID's contract canals cannot exceed the difference between the contracted storage limit measured at the headgate of those canals and the actual storage delivered.
7. The maximum water quantified as CREP water from NPPD's canals and contract canals cannot exceed the difference between the contractual limitation on storage water use contained in the 1954 Water Storage Agreement between CNPPID and NPPD and the actual storage delivered to that location.
8. The CREP water savings will be calculated on September 30 of the year that it was accrued and will be tracked separately in Lake McConaughy. The CREP water will be charged evaporation and seepage losses in proportion to the amount of CREP water to the total amount of water in the Lake in the same manner as the Environmental Account.
9. If at any time during the year the elevation of Lake McConaughy is above the target elevation of 3,218 feet msl or 650,000 acre feet of storage as identified in the Memorandum of Agreement between the United States Department of Agriculture and the NDNR regarding the Nebraska Platte-Republican Resources Area CREP, the CREP water will cease to be tracked separately and will become available for use by CNPPID and its water service customers. When the elevation of Lake McConaughy falls below the target elevation, CREP water savings will accrue when diversions are made.
10. If the land enrolled in CREP is irrigated by both surface and ground water it shall be assumed that the land was irrigated with ground water only. No surface water savings will be considered CREP water unless the NDNR provides documentation to prove otherwise.
11. CNPPID does not guarantee, warrant or insure to the NDNR its right or authority to enter into this Agreement or to provide the water services described herein. NDNR shall make no claims against CNPPID on account of any party having a superior right to the use of the CREP water. In the event any party claims to have a superior right to the use of the CREP water, CNPPID, in its sole discretion, may settle said claim or claims for such consideration and upon such terms as CNPPID may deem proper.

12. This Agreement is for a term of twenty (20) years beginning on the first day of April, 2005, and ending on the last on the last day of March, 2025. The term of this Agreement may be extended or earlier terminated by mutual written agreement of CNPPID and NDNR.
