Recharge Facilities (AOP)

Dawson County Canal

Location & Capacity

Name of Facility (If Only One Facility, This Is the Canal Name) *Dawson County Canal*

Type of Facility *Canal*

Delivery Point Coordinates

Latitude *40.84801*Longitude *-99.985*

Operational Constraints: Enter Dates or Describe in the Narrative below When Can This Facility Can Be Operated?

Begin Date of Constraints (Optional): *01/01/2024*End Date of Constraints (Optional): *12/31/2024*

Narrative of Constraints: Describe Details (Example: Weather Is Too Cold, so Cannot Operate the Facility) *Cannot operate canal for recharge if: - Operating the canal for irrigation - Maintenance is occurring - Operations may cause the canal prism to freeze*

Diversion Rate from Stream (CFS)

Amount needed to be diverted in order to deliver the amount specified in the next question below. The total of the diversion values entered for all project facilities should add up to the amount to be appropriated in the application section. *100*

Delivery Rate (CFS)

Amount to Be delivered into the project facility from the stream diversion. If your project consists of one canal, then the value for this question should be the same as the value for the previous question. For projects where a canal delivers water to a recharge site: (the stream diversion rate) minus (the project facility delivery rate) = canal loss. *100*

Anticipated Maximum Annual Diversion (AF)

The upper limit of water diverted from the stream for this project facility. *10000*

Maximum Operational Head (FT)

For reservoirs and wetlands, how deep will the water get? For canal sections, what is the maximum height of water (head) in the canal while diversions under this application are occurring? *5*

Maximum Water Surface Area (Acres)

For reservoirs and wetlands, what will be the maximum water surface area corresponding to the maximum head. For canals this would be the average canal width multiplied by the canal section length where recharge will occur. *200*

Are Engineering Drawings Available? No
