HYDROGRAPHIC REPORT

INTRODUCTION

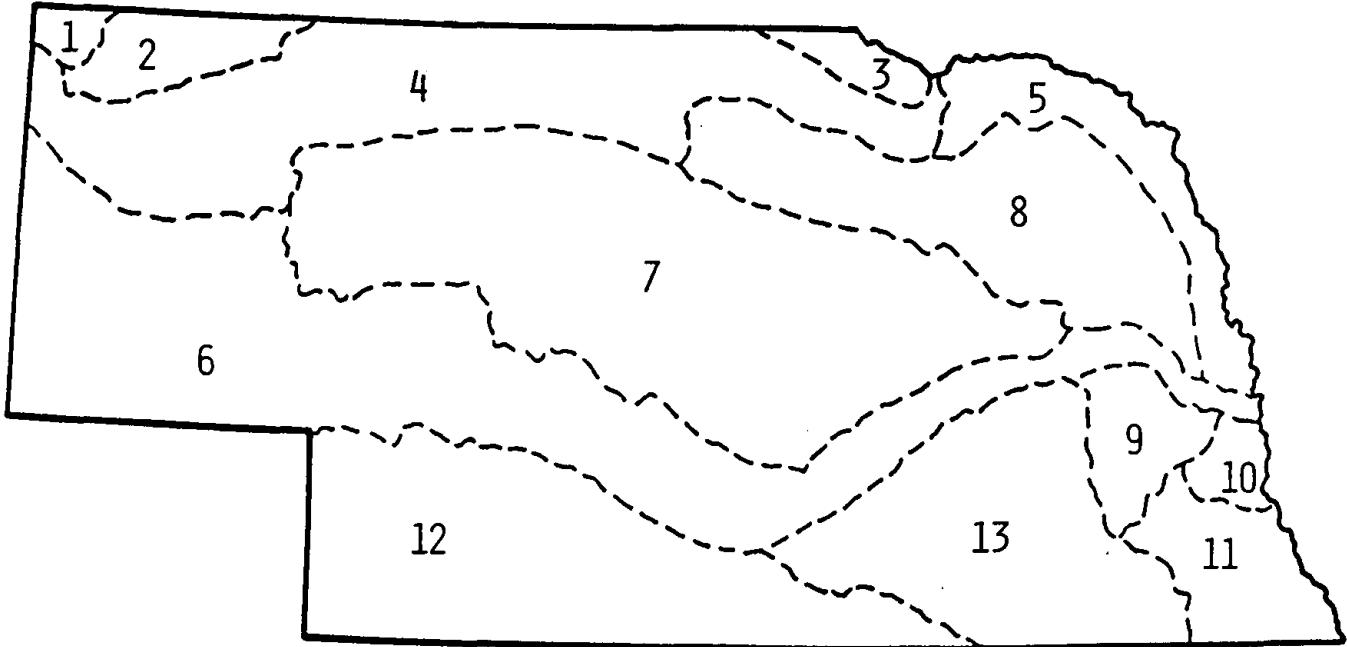

The Hydrographic Report provides a record of streamflow, diversions for irrigation, power, reservoir storage and related data pertaining to water flow and use in Nebraska in accordance with the Department of Water Resources statutory authority granted under Statutes 46-212, 46-227, and 46-234. All measurement sites are referred to the legal coordinates of Section, Township, and Range, East or West of the 6th Principal Meridian. The records are listed in order from upstream to downstream according to the river basin and subbasin map shown on page iv.

The basic stream gaging program in Nebraska is carried out under a cooperative agreement between the Water Resources Division, United States Geological Survey and the Nebraska Department of Water Resources. These records are published annually by the U.S. Geological Survey in the report titled Water Resources Data for Nebraska. The additional streamflow records published in this Hydrographic Report are collected by the Department of Water Resources in cooperation with organizations acknowledged in the record. Storage data for reservoirs in the Papillion and Salt Creek Basins was provided by the U.S. Army Corps of Engineers, Missouri River Division.

Data from both the gaging stations operated under the cooperative agreement and those operated by the Department are available from the Nebraska Natural Resources Commission's computerized Data Bank. Streamflow, canal diversion and reservoir storage records for years preceding this year's data published in this report, may be retrieved by contacting the Data Bank Administrator, Nebraska Natural Resources Commission, P.O. Box 94876, Lincoln, Nebraska 68509-4876.

Most of the stream gaging activity in the state of Nebraska is published in the Department's Hydrographic Report and the Water Resources Data for Nebraska published by the U.S. Geological Survey.

Copies of the Hydrographic Report may be obtained by addressing the Department of Water Resources, P.O. Box 94676, Lincoln, Nebraska 68509-4676. Copies of the publication Water Resources Data for Nebraska may be obtained by addressing the District Chief, U.S. Geological Survey, Room 406, Federal Building and U.S. Courthouse, Lincoln, Nebraska 68508, or the Department of Water Resources.

Data in each section of this report is listed in the following basin order:

1. HAT CREEK
2. WHITE RIVER
3. PONCA CREEK
4. NIOBRARA RIVER
5. MISSOURI RIVER TRIBS. (NIOBRARA TO PLATTE)
6. PLATTE RIVER
7. LOUP RIVER
8. ELKHORN RIVER
9. SALT CREEK
10. MISSOURI RIVER TRIBS. (PLATTE TO NEMAH)
11. NEMAH RIVERS
12. REPUBLICAN RIVER
13. BLUE RIVERS

## EXPLANATION OF DATA

The hydrologic data presented in this report was obtained during calendar year 1989. All instantaneous and daily discharge values are expressed in cubic feet per second. Monthly and annual discharge values and reservoir storage totals are expressed in acre-feet. The data may be converted to other common units of measurement using the table of equivalents listed below:

|   |                                      |
|---|--------------------------------------|
| 1 cubic foot . . . . .                  | 7.48 gallons or 62.4 lbs. of water   |
| 1 cubic foot . . . . .                  | 0.02832 cubic meters                 |
| 1 acre-foot . . . . .                   | 43,560 cubic feet or 325,851 gallons |
| 1 cubic foot per second (cfs) . . . . . | 448.8 gallons per minute             |
| 1 cfs for 24 hours . . . . .            | 1.983 acre-feet                      |
| 1,000 gallons per minute . . . . .      | 2.23 cfs                             |
| 1,000 gallons per minute . . . . .      | 4.42 acre-feet per day               |

The data presented in the first section of the report includes mean daily discharges for streams and canals, and both daily and monthly reservoir storage values. The mean daily discharge values were obtained from water stage recorders, or readings taken by an observer.

The water diverted from streams into canals is measured at gages located as near as possible to the canal headgates. The legal description of the land on which the measuring device is situated is provided in the heading for each record. The length of time that the station has been operated is also listed in the heading. Water rights served by a diversion are listed at the bottom of each record. A further explanation of the listed water rights is found in the Department of Water Resources' Biennial Report.

Many discharge measurements are made on streams, canals and pumps in the course of regulating diversions to water users. In addition to measurements taken during times of water shortage, numerous sites on streams and canals are measured several times per year on a regular basis. Those measurements are listed in the second and third sections of the report. The measurements define the quantity of flow at the time the reading was obtained. A number of the miscellaneous streamflow measurements were taken under base-flow conditions. Base-flow conditions occur when streamflow consists entirely of ground water seepage, with no withdrawal for irrigation and minimum vegetation growth.

The following monthly summaries for Farmers and Northport Irrigation Districts do not represent actual gaged diversions but are values charged to each Irrigation District derived from gaged diversions, transportation loss adjustments and available water supplies from the North Platte River and drains.

### SUMMARY OF DIVERSIONS FOR FARMERS IRRIGATION DISTRICT - 1989 Values in Acre-feet

|                       | Apr.         | May           | June          | July          | Aug.          | Sep.          | Totals         |
|-----------------------|--------------|---------------|---------------|---------------|---------------|---------------|----------------|
| <b>Diverted from:</b> |              |               |               |               |               |               |                |
| North Platte River    | 1,760        | 17,560        | 32,890        | 53,890        | 46,400        | 23,400        | 175,900        |
| *Optional diversions  | 0            | 0             | 90            | 630           | 760           | 470           | 1,950          |
| **Drains              | 0            | 1,540         | 3,530         | 0             | 0             | 0             | 5,070          |
| <b>Totals</b>         | <b>1,760</b> | <b>19,100</b> | <b>36,510</b> | <b>54,520</b> | <b>47,160</b> | <b>23,870</b> | <b>182,920</b> |

\*Diversions from Alliance Drain are not into the main Tri-State Canal but diverted directly from the drain onto Farmers Irrigation District land.

\*\*Other drains are Akers Draw, Sheep Creek, Dry Spottedtail Creek, Wet Spottedtail Creek and Tub Springs. These drains are diverted into the Tri-State Canal.

### SUMMARY OF DIVERSIONS FOR NORTHPORT IRRIGATION DISTRICT - 1989 Values in Acre-feet

|                       | May          | June         | July          | Aug.          | Sep.          | Totals        |
|-----------------------|--------------|--------------|---------------|---------------|---------------|---------------|
| <b>Diverted from:</b> |              |              |               |               |               |               |
| North Platte River    | 1,240        | 1,960        | 15,420        | 13,850        | 4,030         | 36,500        |
| Drains                | 4,800        | 2,210        | 6,700         | 9,100         | 7,800         | 30,610        |
| <b>Totals</b>         | <b>6,040</b> | <b>4,170</b> | <b>22,120</b> | <b>22,950</b> | <b>11,830</b> | <b>67,110</b> |

\*Water from drains includes runoff and return flow from the North Platte Project, Interstate division. This water is intercepted by the Tri-State Canal for delivery to Northport Irrigation District lands. Water diverted from the drains in excess of delivery charged to Northport is charged to Farmers Irrigation District. Drains are Akers Draw, Sheep Creek, Dry Spottedtail Creek, Wet Spottedtail Creek, and Tub Springs.

TUB SPRINGS near Scottsbluff - 1989

LOCATION.--SW1/4SW1/4 Sec. 33-23-55 W.

GAGE.--Continuous stage recorder

PERIOD OF RECORD.--1948 - present

REMARKS.--Published by United States Geological Survey from 1948 - 1979

EXTREMES FOR PERIOD OF RECORD.--Maximum discharge 1610, June 21, 1952 on basis of slope-area measurement of peak flow caused by break in Interstate Canal, no gage height determined.  
 Minimum daily discharge 0.70 cubic feet per second May 7, 1965.

EXTREMES FOR CURRENT YEAR.--Maximum discharge 283 cubic feet per second on May 11, gage height 2.09 feet.  
 Minimum daily discharge 17 cubic feet per second, July 8 - 13.

**MALONEY RESERVOIR** from North Platte River - 1989

LOCATION.--NW1/4NW1/4 Sec. 5-12-30 W. near North Platte

GAGE.--Staff gage

PERIOD OF RECORD.--1936 - present

REMARKS.--Published as combined total of Sutherland and Maloney Reservoirs prior to 1988.

GAGE.--Continuous stage recorder

PERIOD OF RECORD.--1978 - present

REMARKS.--Values furnished by Central Nebraska Public Power and Irrigation District.

Published storage values before 1984 were for storage above the minimum operating level. Add 13,085 acre-feet to values listed in pre-1984 reports before comparing to values in this report.
