State Irrigation Office Building at Bridgeport

Bridgeport, Nebraska,
November 30, 1934.

Hon. A. T. Lobdell,
Acting State Engineer,
Department of Roads and Irrigation,
Lincoln, Nebraska.

Dear Sir:

Pursuant to an established custom, I have the privilege of reporting to you the official transactions of the Bureau of Irrigation, Water Power, and Drainage for the biennium ending September 30, 1934.

Water Supply

There was a slight water shortage in 1933, and a very pronounced shortage in 1934. The water users of the Platte River basin suffered to a greater extent than did some of the water users of the other important basins of the State.

The annual water supply of the Platte River basin from the headwaters to Overton, Nebraska, was 67 per cent of the ten year mean (1923-1932), for 1933, and 33 per cent for 1934. The water available for seven months (October to April inclusive) was 62 per cent for 1933, and 58 per cent for 1934. For the irrigation season, (May to September inclusive), the available supply was 67 per cent for 1933, and 9 per cent for 1934.

The total Pathfinder Storage available for the 1934 season was 330,000 acre-feet, being 37 per cent of the 24 year mean (1911 to 1934 inclusive). The quantity impounded between October 19, 1933, and May 16, 1934, was 228,000 acre-feet, equivalent to 38 per cent of the 24 year mean. The 1934 inflow above the Pathfinder Reservoir was 27 per cent of the 31 year mean (1904 to 1934 inclusive), which is the lowest of record.

There was some available storage in the Guernsey Reservoir in addition to the Pathfinder Storage, amounting to 23,000 acre-feet in 1933, and 44,000 acre-feet in 1934, which was withdrawn and used on lands having storage rights.

The flow of the South Platte River during the biennium was ex-

tremely low, however, the Western Irrigation District succeeded in diverting 2.44 acre-feet per acre in 1933, and 2.02 acre-feet per acre in 1934. This is fairly good, in view of the fact that many of the streams in the State were entirely dry during the summer of 1934.

The water available in the Hat Creek and White River basins was much below normal during the biennium. In fact, during a portion of the 1934 irrigation season, the supply was barely sufficient for domestic purposes.

Water Administration

The administration of the available water supply in the Platte River basin for the 1933 season was not particularly difficult. There was sufficient water throughout the season for appropriations antedating December 28, 1894. Appropriations subsequent to December 28, 1894, were permitted to divert water intermittently during July, August, and September.

For the 1934 season, much difficulty was experienced from May 10 to the end of the season, particularly in the Platte River basin. An effort was made to conduct water down the river to supply the two oldest priorities in the Platte River basin, namely Kearney and the Platte Valley projects. All projects having priorities subsequent to January 20, 1892, were intermittently kept closed up to July 10, on which date canals having rights subsequent to December 19, 1889, were closed and denied water until July 17, with the intention of benefitting the Platte Valley Irrigation District, which has a priority of May 31, 1884. On July 6, all the water in the river at the headgate of the Platte Valley canal, amounting to 196 second-feet, was flowing into the canal. This quantity diminished daily until on the 16th, 21 second-feet were flowing. Notwithstanding that these canals continued closed for fourteen days, the flow of water into the Platte Valley canal ceased entirely on July 21.

After July 21, the available water was administered in the order of priority on a higher water duty, excluding the Kearney and Platte Valley canals. Appropriators having priorities subsequent to December 19, 1889, were allowed to divert from one-third to one-half of their respective appropriations. This arrangement permitted the use of water to a greater number of projects, but necessitated closer supervision of the water by the individual user.

Water began to flow into the Platte Valley canal again on September 9. Forty-seven second-feet were flowing on the 10th, and near the end of September, 99 second-feet were diverted. This was

all the management cared to divert, because of a leak in the dam caused by beavers.

Many demands for administration of the available water supply were made on the Department throughout the 1934 season, by appropriators on nearly every stream in the State, except the Loups and the Niobrara River. Among those streams demanding water commissioner services were Clear Creek, Turkey Creek, the Blue Rivers, Gordon, Boardman, Bear, Beaver, and Buffalo creeks. There were no water commissioners available for those streams, causing some criticism of the department, although some service was rendered by shunting a hydrographer from remote points, where he was already employed, to these streams. Appropriators on these streams believe they are entitled to water commissioner services. To have priorities and not have them enforced makes those rights almost worthless. The appropriators on the Frenchman River, Republican River, Hat Creek, White River, and the upper part of the Niobrara River, should have more service from water commissioners than they have been getting.

There have been several complaints from water users on the South Platte River in Nebraska against the Colorado water users. Reports come to the Department that conditions of the Colorado-Nebraska River Compact have been violated. No investigation is made because water commissioners and hydrographers employed have many more demands on their time and services than they can take care of.

Administration of the available water supply of several streams of the State has become an all year around requirement. The Hat Creek basin, White River, Snake Creek, Lodgepole Creek, Frenchman River, and the North Platte River require patrolling 365 days of the year, because of storage and water power appropriators.

Because of drouth conditions and low water supply, a large number of pumps were placed in operation under many projects, pumping water from drainage canals and using it on farms adjacent to the drainage ditch; notwithstanding that some of these projects, having junior rights, were taking water that otherwise would flow by gravity to appropriators having senior rights. Nothing was done by the Department to police pumping from drainage canals, because the ownership of the drainage water is still debatable.

Precipitation

The annual precipitation in the irrigated section was normal, or above normal, in 1933 at Oshkosh, North Platte, Lexington, Culbertson, and Fort Robinson, and eighty-five and seventy-one per cent of normal at Mitchell and Bridgeport respectively.

In 1934, the precipitation at the same stations was from fifty per cent to seventy-five per cent of normal. The greatest deficiency was at Bridgeport and Lexington.

The precipitation over the upper North Platte River basin was eighty-three and sixty-five per cent for 1933 and 1934 respectively.

There were fifteen inches of snow in the higher elevations of the Platte River basin in Wyoming in 1934, as compared with fifty-five inches in 1933.

Hydrography

Under a cooperative agreement between the United States Geological Survey and the Department, stream measurements for the biennium were made on all the streams of the State. However, fewer measurements were made because a fewer number of water commissioners were employed, and hydrographers were taken from their regular duties to supplement the work of the water commissioners. The total number of actual measurements made by hydrographers of canals and streams was 7,136 for the biennium, as compared with 10,675 for the previous biennium.

Seventy-seven daily discharge data have been compiled on streams other than the Platte, North Platte, and South Platte Rivers, which data are published in this report.

Water Commissioners

Two water commissioners were employed on the North Platte River and tributaries, two on Lodgepole Creek, one on the Frenchman and Republican Rivers, and one on the White River, Niobrara River, and Hat Creek, including tributaries. This number of water commissioners was not sufficient to meet the demands of water users. Two hydrographers were taken from their regular duties to assist the water commissioners. It was impossible to render satisfactory service to all the water users having appropriations on the many streams in the State. The demand for service exists every year on streams west of a north and south line through Kearney, but this line was moved east during this biennium to about Wahoo.

Observers

The number of observers employed were reduced from about forty in 1931 to two in 1934. Water commissioners and hydrographers took over the work of the observers. These, together with thirty-two automatic recorders in operation in 1934, eliminated a part of the observers formerly employed.

Interstate Problems

During the biennium, Wyoming appropriators diverted water under authority of the Wyoming State Engineer, disregarding Nebraska priorities. Conferences were held in Cheyenne among State officials of the two States, for the purpose of having Nebraska priorities respected. The Wyoming officials finally gave notice that priorities in Nebraska would not be recognized until a compact between the states was made, or until a court order was issued commanding recognition of Nebraska's rights. Hence, suit was initiated in the Federal Supreme Court in the latter part of September, 1934, by Nebraska against Wyoming, seeking an equitable portion of the water of the Platte River basin for Nebraska water users.

Below is a summary covering the activities of the Division of Statistics from November 30, 1932, to November 30, 1934:

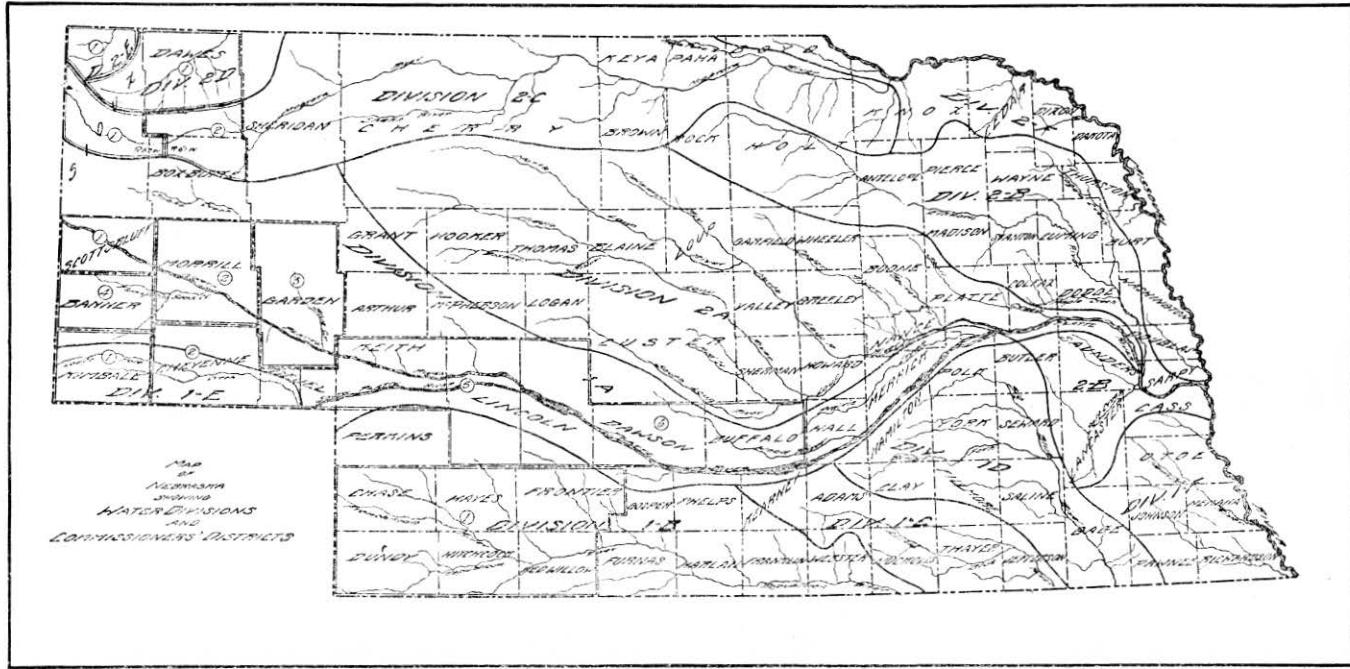

Applications for water appropriations.....	205
Permits issued.....	162
Applications and claims canceled.....	34
Applications dismissed.....	21
Applications pending.....	65
Hearings held	25
Relocation permits	9
Petitions for relocations dismissed.....	2
Water power leases.....	4
Deeds recorded	82
Maps and plans filed.....	140
Field inspection reports recorded	221
Fees collected covering:	
Applications, plans of dams, leases and deeds.....	\$8,910.30
Copying records	359.10
 Total fees	 \$9,269.40

Recommendations

More water commissioners should be employed to meet the demands of appropriators who should have their rights protected.

Respectfully submitted,

R. H. Willis Chief,
Bureau of Irrigation, Water
Power and Drainage.

DIVISION OF STATISTICS

WATER DIVISIONS AND WATER DISTRICTS

WATER DIVISIONS—The State of Nebraska is hereby divided into two water divisions denominated Water Division No. 1 and Water Division No. 2, respectively. (C. S. 1922, 8415; C. S. 1929, 46-510).

BOUNDARIES OF DIVISION NO. 1—Water Division No. 1 shall consist of all the lands in the state drained by the Platte Rivers and their tributaries lying west of the mouth of the Loup River; and also all other lands lying south of the Platte and South Platte Rivers that may be watered from other superficial subterranean streams not tributary to the Platte River. (C. S. 1922, 8416; C. S. 1929, 46-511).

BOUNDARIES OF DIVISION NO. 2—Water Division No. 2 shall consist of all lands that may be watered from the Loup, White, Niobrara and Elkhorn Rivers and their tributaries, and other lands of the State not included in any other water division. (C. S. 1922, 8417; C. S. 1929, 46-512).

For convenience in the adjudication of claims and in the distribution of water, these divisions have been subdivided into twelve water divisions, denominated 1-A, 1-B, 1-C, 1-D, 1-E, 1-F, 2-A, 2-B, 2-C, 2-D, 2-E and 2-F, as shown on the opposite page.

CLAIMS AND APPLICATIONS

The table on the following pages gives a complete list of all claims and applications of record in the Bureau of Irrigation, Water Power and Drainage of the Department of Roads and Irrigation which have not been canceled, and this list also includes applications which have been filed and not approved. Following this table are the applications and claims which have been canceled and dismissed.

The claims and applications have been arranged in each water division by stream in alphabetical order, and the appropriations on each stream are arranged in order of priority.

Appropriations having docket numbers refer to claims covering rights acquired under the law prior to April 4, 1895, and those having application numbers are permits to appropriate water granted under the law of 1895.

DEPARTMENT OF ROADS AND IRRIGATION

DRAINAGE DISTRICTS

Below is a complete list of drainage districts of record in this Bureau:

COUNTY	NAME OF DISTRICT	DATE OF APPROVAL OF PLANS
Buffalo	John Swenson Drainage Ditch	Nov. 5, 1929
Burt-Thurston	Lyons Drainage Ditch	-----
Burt-Washington	Burt-Washington County Drainage District No. 1	Aug. 2, 1915
Burt-Washington	Burt-Washington County Drainage District No. 2	Feb. 19, 1925
Burt-Washington	Peterson Bend Protection District	Sept. 2, 1921 (Retards)
Butler	Yanike Drainage District	-----
Butler	Drainage District No. 1	Aug. 5, 1918
Butler	Drainage District No. 2	July 26, 1917
Cedar	Laurel Drainage District	Dec. 15, 1925
Cherry	Horseshoe Lake Drainage District	Aug. 8, 1916
Cherry	Gay Lake Drainage District	Sept. 1, 1922
Cherry	Boardman Drainage District	June 23, 1923
Cherry	Coffey Lake Drainage District	Dec. 16, 1924
Cherry	Mile Board Drainage District	Sept. 30, 1925
Colfax	Platte Valley Drainage District	Dec. 28, 1920
Dakota	Drainage District No. 2	April 18, 1914
Dakota	Homer Drainage District	Jan. 10, 1919
Dakota	Dakota City Drainage District	April 3, 1922
Dakota	Omadi Drainage District	Dec. 13, 1924
Dakota	Drainage District No. 5	July 10, 1930
Dawson	Drainage District No. 1	July 5, 1929
Dawson	Drainage District No. 2	June 7, 1930
Dawson	Drainage District No. 3	May 1, 1931
Dixon-Wayne-Thurston	Wakefield Drainage District	Jan. 18, 1917
Dixon-Cedar	Brooke Bottom Drainage District	Sept. 11, 1922 (Retards)
Dixon-Cedar	North and South Logan Drainage District	Feb. 17, 1925
Dodge-Washington	Elkhorn River Drainage District (Cut-Off "H")	-----
Douglas	Little Papillion Drainage District	Mar. 2, 1920
Douglas	East Omaha Drainage District	Oct. 8, 1921
Douglas	Elkhorn Valley Drainage District (Safford Ditch)	Jan. 9, 1926
Douglas	Papio Drainage District No. 2	June 5, 1926
Douglas-Sarpy	Elkhorn Valley Drainage District	June 24, 1919
Douglas-Sarpy	Elkhorn Valley Drainage District (Elkhorn River Cut-Off and Extension of Main Ditch No. 3)	Nov. 8, 1922
Douglas-Sarpy	Elkhorn Valley Drainage District	May 26, 1923 (Retards)
Fillmore	Drainage District	-----
Franklin	Republican River Drainage District	-----
Frontier	Drainage District No. 1	Mar. 31, 1915
Furnas	Republican River Control	July 22, 1931

COUNTY	NAME OF DISTRICT	DATE OF APPROVAL OF PLANS
Garden	Garden County Improvement and Drainage District No. 1 (Oshkosh Drainage District)	June 28, 1932
Knox	Frankfort Bottom Drainage District	Mar. 3, 1928 (Retards)
Lancaster	Salt Creek Drainage District Lancaster Drainage District No. 1
Lincoln	Drainage District No. 1	Mar. 23, 1922
Lincoln	Drainage District No. 2	Dec. 4, 1929
Madison	Norfolk Drainage District	Mar. 18, 1924
Merrick	Drainage District No. 1	Feb. 17, 1916
Merrick	Drainage District No. 2	May 10, 1921
Morrill	Minatare Drainage District
Nemaha	Drainage District No. 3	July 6, 1916

**INCREASE IN FLOW OF THE NORTH PLATTE AND PLATTE
RIVERS FROM WHALEN DAM, WYOMING, TO
OVERTON, NEBRASKA**

By F. F. Le Fever
Assistant Engineer, U. S. Geological Survey

Introduction

Results of the study of increase in flow of the North Platte and Platte Rivers throughout the irrigated area in eastern Wyoming and Nebraska during the water years ending September 30, 1932, 1933, and 1934 are presented in the following report. The investigations having been conducted on a similar basis to those during the water year ending September 30, 1931,¹ and comparisons are made with the data for that year.

The scope of the work was extended in 1932 to include the section of the Platte River between North Platte and Overton. As the latter station is at practically the lower end of the area irrigated by surface water in the Platte Valley, the territory covered by this report includes essentially the entire irrigated area below Whalen Dam.

Division of Work

The work was carried on under a cooperative agreement between the State engineer of Nebraska and the United States Geological Survey. Most of the field work between the Wyoming-Nebraska line and Lisco was performed by the writer. All other field work in Nebraska was carried on by A. W. Hall, A. E. Johnston, and F. B. Shaffer, assistants of R. H. Willis, Chief Bureau of Irrigation, Water Power, and Drainage. Field work at the station on the North Platte at the Wyoming-Nebraska line was performed by Floyd M. Roush in 1932, Earl Lloyd in 1933, and Carl A. Gaesslen in 1934, engineers of Wyoming, and by A. W. Hall, A. E. Johnston, and the writer. Field work in Wyoming was performed by the Wyoming engineers mentioned previously. The Bureau of Reclamation furnished the records at Whalen Dam, including the diversions by the Interstate and Fort Laramie canals.

¹ Department of Public Works: Nineteenth Biennial Report, pp. 300-310.

Records for the river stations, except at the Whalen Dam, were computed by the district office of the United States Geological Survey in Denver, those for most of the tributary streams between the State line and Overton, by the writer, and those for the diversions in Nebraska, by A. W. Hall, assistant engineer, and F. B. Shaffer, office engineer, State of Nebraska. The report was prepared by the writer under the direction of Robert Follansbee, district engineer of the Geological Survey.

Acknowledgements are due the Bureau of Reclamation for discharge records at Guernsey and Whalen Dam, officials of the Pathfinder and Goshen Irrigation Districts for records of operation, and the Wyoming State Engineer's office for records of diversions between Whalen Dam and the State line.

Irrigated Area

Based chiefly on the acreages reported by the various irrigation projects, the total area irrigated between Whalen Dam and Overton varied from 691,000 acres in 1932 to 663,400 acres in 1934. For the purpose of this report it is convenient to use the three natural divisions, (1) Whalen Dam to Lisco, (2) Lisco to North Platte, and (3) North Platte to Overton, into which the irrigated area is divided by the topography of the valley. In making studies of the 1931 water year it was necessary to divide the upper section at Bridgeport, as there was no gaging station at Lisco at that time.

Method of Investigation

In general the data for the last three years were obtained by similar field methods to those used in 1931. It is believed that the base data have been improved in accuracy each year, due chiefly to the installation of water-stage recorders at Torrington, Minatare, and Lisco in 1932, at Oshkosh in 1933, and at Martin in 1934. The stretch of river studied during the past three years, 305 miles in length, was divided into 9 sections in 1934 by 10 river gaging stations all equipped with water stage recorders. In addition, water stage recorders were installed on several of the tributary streams in 1934.

Division of Report

This report is divided into four sections as follows: Section I—a study of the actual increase in the river, both visible and invisible, from all sources; Section II—a study of the return flow from irrigation; Section III—comparisons by years of results and of factors affecting them; Section IV—conclusions.

SECTION I—ACTUAL INCREASE FROM ALL SOURCES

Visible inflow was measured directly at stations maintained on all tributaries near the mouth, and below all diversions.

Invisible inflow in this part of the report, for any section of the river, is the difference between the actual river discharge at the lower end of the section and the theoretical flow at that point computed by adding to the river discharge at the upper end of the section the visible inflow in the section and subtracting the diversions. If the actual discharge at the lower end of the section is greater than the computed discharge an invisible inflow is indicated. If the reverse is true a loss is indicated, and this loss is shown in the following tables as a negative invisible inflow.

The net pickup contributed by any section is the algebraic sum of the visible and invisible inflow in the section.

Evaporation losses are not considered in this part of the report which is concerned with the actual increase in the river, and not the total increase which is lessened by the evaporation losses. These are considered in Section II, where they are added to the invisible increase, to determine the total or gross invisible increase.

The scattered negative values for invisible inflow in the upper sections of the river are probably due in part to inaccuracies in the river records at the stations involved. A relatively small error in one or both of the monthly river records may result in a relatively large error in the invisible inflow based upon those records, owing to the greater amount of water involved in the river discharges. Changes in channel storage during the month, for the river section involved, cause some of the negative values and in some instances, gains which appear too large. In section II of the report correction to the 1933 and 1934 invisible gains for the change in channel storage has been made.

The total invisible gain for the year, or irrigation season, determined by adding the monthly values algebraically is believed by the writer to be nearer the actual figure than the total obtained by adding only the positive values, as by the former method, the errors in individual monthly values due to the inaccuracies described, tend to compensate. However, the invisible increase for the year, based on the total of the positive monthly values only, and neglecting the negative values is also shown.

Increase in Flow of the River

The increase in flow, both visible and invisible, from all sources is shown in the following tables by months for each section of the river:

The greatest combined visible and invisible, or total, annual gain per mile occurred in the sections between the State line and Bridgeport in each of the three years and the smallest increase or greatest loss per mile occurred in the section between North Platte and Overton.

Although the increase in flow is shown in the preceding tables for the entire year, the increase for the irrigation season, May to September is chiefly of value to irrigation interests, and such increase is summarized as follows:

**SUMMARY OF INCREASE IN FLOW (ACRE-FEET) OF THE

Whalen Dam to Overton....	1,273,000	347,000	74	75	26	25

a Greater than net increases due to losses.

b Loss.

It will be noted with reference to the foregoing tables that in the upper division (Whalen Dam to Lisco), the invisible increase amounted to from 25 to 39 per cent of the total increase for the full years, and from 28 to 48 per cent of the total increase, for the irrigation seasons. In the middle division (Lisco to North Platte), invisible increase amounted to from 26 to 38 per cent of the total for the full years while for the irrigation seasons there was a variation from a loss in 1934 to 39 per cent of the total increase in 1933. In the lower division the figures for total invisible gains for the years and for the irrigation seasons were all negative indicating losses.

SECTION II—RETURN FLOW FROM IRRIGATION

Method of Determining Return Flow from Irrigation

In correcting the preceding tabulations for inflow from sources other than return from irrigation, the methods used in the 1931 report were followed.

Corrections added to the invisible gain during the 3 years covered by this report for evaporation losses, are generally higher than the corresponding corrections in the 1931 report, as a slightly greater average width of river channel was used in the former computations. The amounts deducted for increase in the flow of tributaries which were apparently due to precipitation, were larger in 1932 and 1933 than in 1931 and 1934 because in general, precipitation was greater over the area during the former years.

Records of waste, or unused water returned to the river, by the various canals were incomplete, particularly on the smaller canals. It is believed that the unused water comprises a relatively small portion of the total amount diverted, especially in irrigation seasons like those here considered when the water supply was limited and precipitation was normal or below normal. Therefore, no attempt was made to compile figures for the waste water returned in each section, and the figures for modified visible and invisible increase in flow include unused water, as well as return flow which reached the river after having percolated through the soil.

Modified Record of Increase in Flow

The following tables show the visible and invisible increase in flow of the river after deductions for flow from all known sources other than irrigation, and additions for evaporation losses and return flow from irrigation diverted by canals before reaching the river have been made. Invisible gains in the following tables for 1933 and 1934 were corrected for change in channel storage:

Whalen Dam to Overton....	970,800	362,600	53	51	47	49

a Greater than total increase due to losses.

b Loss.

As compared to the invisible increases based on the unmodified records, the invisible increases in the preceding tables comprise a larger percentage of the total gain. This is due to the elimination of visible flow from sources other than return from irrigation, and addition to the invisible gain for evaporation. As a result, even the lower division North Platte to Overton shows an invisible gain for each year, except 1934. The great invisible gain in the lower division in 1933 is due to precipitation which found its way directly to the river and was not deducted from the visible inflow.

SECTION III—COMPARISONS OF RESULTS AND OF FACTORS AFFECTING THEM

The following tables show the annual increase by sections, both visible and invisible, modified or corrected, as described in section II, arranged for comparison of the results by years. The first table shows the yearly increase and the second shows the increase during the irrigation season only, while the lower half of each table shows the accumulative gains by sections. For example, the figure 715,900 in the column headed "Oshkosh-North Platte" in the last half of the first table, is the total visible gain between Whalen and North Platte and the figure to the right is the total invisible gain.

In general the visible and invisible increases in the various sections were greatest in 1933, the year in which river discharge was the greatest and precipitation approximately normal. In 1934 the increases were usually less than in any of the other three years. As shown by tables of comparison later in the report, the precipitation during the year and the growing season was below normal and the water supply for irrigation extremely low.

Allowances should be made for differences in the amount and distribution of precipitation especially during the growing season, and also for the difference in irrigation water supply, when comparing the results of the investigation of increase in flow for different years.

Precipitation records at 7 United States Weather Bureau stations were used in compiling the following table which shows in a general way the conditions existing over the irrigated area.

COMPARISON OF PRECIPITATION OVER IRRIGATED AREA WITH NORMAL

* Total precipitation for February estimated.

River discharge was far below normal throughout the irrigated area during the irrigation seasons 1931-34 as shown by the following table. A 10-year mean based on 1923-32 was used rather than 1925-34 as it was believed that the former period excluding two of the low cycle years—the extremely low year 1934 especially—would give a fairer basis of comparison.

COMPARISON OF NORTH PLATTE AND PLATTE RIVER DISCHARGE MAY TO SEPTEMBER 1931, 1932, 1933, AND 1934 WITH 10-YEAR (1923-32) MEAN FOR MAY TO SEPTEMBER

STATION	10 YEAR MEAN (1923-32) (ACRE FEET)	PER CENT OF 10 YEAR (1923-32) MEAN			
		1931	1932	1933	1934
Whalen*	1,430,000	75	92	96	32
Mitchell.....	667,000	20	32	52	5
Bridgeport.....	834,000	29	39	63	7
North Platte.....	926,500	21	36	69	9
Overton†.....	990,800	13	16	51	0.3

* Includes amount diverted by Interstate and Ft. Laramie Canals.

† No record available at Overton for 1924. Record for Lexington used for that year.

SECTION IV—CONCLUSIONS

During the irrigation season 1934 when the river discharge reached all time lows for the period of record at many stations, irrigation pumps were installed on several of the tributary streams. Most of the pumping was confined to the period between August 20 and

September 15. Although the effect on the discharge at the mouth of these streams was very pronounced in some instances during this short period, no corrections have been made in any of the tables.

Increase in flow, and especially that portion of the increase which is return from irrigation, is dependent upon the conditions of supply and demand of water which exist not only during the year for which the study is being made, but also upon those existing during a period of years preceding. Throughout the four years during which this co-operative investigation has been conducted, climatic conditions have been abnormal over the irrigated area, causing greater demands and greater evaporation losses, while climatic conditions over the drainage basin above the irrigated area, have resulted in subnormal supply.

Definite conclusions based on 4 year's record only, covering the present dry cycle, would no doubt be altered or proven incorrect by subsequent results. Many factors affecting the increase in flow of the North Platte River will not be well understood and appreciated until after the investigations have been carried through a period of years which includes normal conditions and also a wet cycle.

Results of the investigation thus far indicate that the greatest return flow per mile occurs in the sections between the State line and Bridgeport. A loss in addition to that of evaporation takes place in the section between North Platte and Overton, apparently, at least in extreme years like 1934. The gain in this section in 1933 was probably due to precipitation which was slightly above normal during the growing season. The gains between Lisco and North Platte have invariably been greater than the amount of water diverted in that division which suggests foreign groundwater from the sand hill region on the north of the valley.

**PWA CONSTRUCTION PROGRAM IN CONNECTION WITH
STREAM GAGING STATIONS**

The allotment of PWA funds to the Geological Survey for construction work in Nebraska, in connection with the cooperative stream gaging program, which has been carried on with Nebraska since 1931, has made it possible to construct substantial shelters, and install automatic water-stage recorders at the following stations:

White River near Chadron
North Platte River at North Platte
Platte River near Grand Island
Platte River near Duncan
Platte River near Ashland
Pumpkin Creek near Bridgeport
Blue Creek near Lewellen
Otter Creek near Lemoyne
Birdwood Creek near Hershey
Middle Loup River at St. Paul
North Loup River at St. Paul
Loup River at Columbus
Elkhorn River at Waterloo
North Fork Republican River at Colorado-Nebraska line

In addition, the FERA furnished labor for the installation of some of these shelters.

RESERVOIRS

BENNETT RESERVOIR—APPLICATIONS 657 AND 1975

Diverted from Lodgepole Creek

This is a channel reservoir on Lodgepole Creek two miles east of Kimball. It has a storage capacity of 960 acre-feet. During the spring of 1933, it was filled almost to capacity and storage was used during the irrigation season until a flood on Lodgepole Creek, which occurred on August 28, washed out a portion of the dam and spillway.

The dam was repaired during the winter, and the reservoir filled to about half its capacity before the irrigation season of 1934. All of the storage was used and the reservoir was almost dry on July 15.

We do not receive reports in regard to this reservoir, except occasional observations by hydrographers.

CRESCENT LAKE—APPLICATION 1575

Secs. 21-22, Twp. 22, Rge. 44 W.

Crescent Lake is a natural sand hill lake about twenty miles north of Oshkosh.

In 1920, an appropriation was granted to the Lake Water Carrying Company as a supplemental supply to the five natural flow rights on Blue Creek. A concrete headgate was constructed in 1921, and a canal about two miles in length built to carry water from Crescent Lake to Blue Creek.

On July 20, 1933, a hearing on petition for the approval of plans for the construction of a proposed new headgate under application 1575 was held before R. H. Willis, Chief of Bureau of Irrigation, Water Power and Drainage. An approval of plans of new headgate issued by the Department dated July 27, 1933, states that the floor of the new headgate is not to be more than four feet lower than that of the old headgate; that the appropriation is limited to 7,000 acre feet by virtue of application 1575 and the rate of withdrawal is not to exceed fifty second-feet.

We have not been able to obtain satisfactory records of withdrawal from storage due to the fact that daily gage heights have not been obtained on the outlet canal.

KILPATRICK RESERVOIR—APPLICATION 1108**Diverted from Frenchman River, Sec. 30, Twp. 6, Rge. 39 W.**

The Kilpatrick Reservoir is located two miles west of Champion. It has a capacity of about 1,000 acre-feet, and receives water from the Frenchman River through a supply canal about two and one-half miles long.

The storage water is used as a supplementary supply for natural flow rights of the Champion Irrigation and Water Power Canal.

This reservoir was full at the beginning of the irrigation season in 1933. The storage was all used during this season, and land under the Champion Canal was short of water due to the fact that the direct flow diversion was closed during most of July and August to supply the Culbertson Canal, which has a senior right.

Practically the same conditions existed during the year 1934.

We do not receive reports from this project, except occasional reports by state hydrographers.

OLIVER RESERVOIR—APPLICATION 897**Diverted from Lodgepole Creek**

This is a channel reservoir on Lodgepole Creek eight miles west of Kimball. It has a capacity of 5,490 acre-feet.

The storage is used to supplement natural flow rights under the Kimball Irrigation District.

We have received occasional reports of storage and outflow during the last two years.

WHITNEY RESERVOIR—APPLICATION 1603**Diverted from White River**

This reservoir is located two miles west of Whitney. It has a capacity of 10,960 acre-feet.

Water is diverted from White River to the reservoir through a wood stave pipe line about five miles long. The storage is used to supplement natural flow rights under the Whitney Irrigation District.

We receive data in regard to storage in the reservoir, but have been unable to get definite information regarding withdrawal from storage.

OPINIONS AND FINDINGS**IN THE DISTRICT COURT OF DAWES COUNTY, NEBRASKA**

In the Matter of Appropriation Docket No. 447, Ox Yoke Canal, Water Division No. 2-D, East Ash Creek.

DECREE NO. 6277

This 28th day of March, 1931, this cause came on for hearing to the Court, Honorable E. L. Meyer, Judge, presiding, upon the original petition and answer and written objections filed before the Department of Public Works, which are contained in the record from the Department herein filed, and the order heretofore on the 11th day of January, 1932, entered herein, and the pleadings, objections and appearances herein, the appellants Mose Neusbaum, C. A. Minick as Administrator of the Estate of Henry B. Tomlin, deceased, and the heirs, and Lewis E. Sprague, and others, Executors of the Will of Henry H. Sprague, Deceased, appearing by Allen G. Fisher, Esq., and Charles A. Fisher, Esq., their attorneys, and appellees Myrtle L. Ivins, and John Stumph appearing by J. E. Porter, Esq., their attorney, the case proceeds until 5:30 P. M. when court is adjourned to the 29th day of March, 1932, at 9:00 A. M., and the court having reconvened on the 29th day of March, 1932, at 9:00 A. M. pursuant to said adjournment, the trial proceeded, and the court having heard the testimony and arguments of counsel aforesaid, takes the matter under advisement.

And now on this 17th day of June, 1932, it being one of the days of the regular March term, 1932, of this Court, the same Judge presiding, the court having considered the evidence and arguments of counsel aforesaid, and being fully advised in the premises does overrule the appearance in the liminie of and objections to jurisdiction interposed by Lewis E. Sprague, Arthur W. Sprague, and Henry Harrison Sprague, Executors of the Last Will and Testament of Henry H. Sprague, deceased, and Sarah E. Sprague, Widow, and Maretta Phillips, with said Executors comprising the heirs at law and devisees of said Henry H. Sprague, deceased, and finds generally in favor of appellees and against the appellants, and that the water under the appropriation heretofore allowed by the State Board of Irrigation through the State Engineer, and by the Department of Public Works, under said Docket No. 447, Water Division No. 2-D, known as Ox Yoke Canal, from East Ash Creek, with a priority date of May 31, 1880, has been used and is being used for the beneficial and useful purposes for which appropriated and allowed, and that neither the said appropriation nor any part thereof is subject to cancellation, an-

nullment or forfeiture, and should not be forfeited, cancelled or annulled for non-use or otherwise.

IT IS THEREFORE ORDERED, ADJUDGED, CONSIDERED AND DECREED BY THE COURT that no part of the water appropriation as heretofore allowed and adjudicated by the State Board of Irrigation through the State Engineer, and by the Department of Public Works of the State of Nebraska, under Docket No. 447, Water Division No. 2-D, known as Ox Yoke Canal, from East Ash Creek, should be or is forfeited, cancelled, or annulled, and that appellants pay the costs herein, taxed at \$.....

To which findings and judgment appellants each for himself and herself except.

E. L. MEYER,
Judge

IN THE DISTRICT COURT OF SCOTTS BLUFF COUNTY, NEBRASKA

The State of Nebraska
ex rel C. A. Sorensen,
Attorney General,
Plaintiff,
vs.
The Mitchell Irrigation
District,
Defendant,
Farmers Irrigation District,
Intervener and Cross-
Petitioner.

FINDINGS OF THE COURT

This case presents two controversies, one between the plaintiff and defendant, and the other between intervener and defendant. The first is an action by the State of Nebraska to place defendant under the jurisdiction and control of the department of irrigation. There is in my judgment no plausible and reasonable defense to this action. The only defense urged is that the waters for the Mitchell Irrigation District are taken out of the North Platte river in the state of Wyoming about a half mile west of the boundary line between the two states. No Wyoming lands are irrigated by this water. Defendant argues from this circumstance that Wyoming authorities only have jurisdiction; that immediately on defendant taking possession of the waters at the head gate in Wyoming they become the private property of the district; furthermore that Wyoming authorities have full control of the head gate and that Nebraska courts can not give Nebraska authorities the right or power to go across the state line to

regulate the head gate and that if Nebraska authorities cannot regulate the head gate it can do nothing. If these waters were like wild catfish in the river, ferae naturae, there would be much in defendant's contention. Or if we had in mind the case of a man going down to the river and capturing a bucket full of water for domestic use defendant might be right in its contentions. In the first case if the fish was caught even a yard over the Nebraska line in Wyoming it would be a matter exclusively for the Wyoming courts and it would be necessary for the disciple of Izaak Walton to have a Wyoming license; his Nebraska license would not protect him and the fact that he was a resident of Nebraska and brought the fish over the line for use in Nebraska would not make him emenable to Nebraska's fishing laws. Wyoming laws as to the number of the catch and all other regulatory provisions of the Wyoming law would govern. And if there were any regulations in regard to taking water for domestic use the laws of Wyoming would likewise control because as soon as the man referred to got his bucket of water it would be his private property. I do not apprehend that any of these circumstances are applicable to the running water of the North Platte river even though it was deflected out of its natural bed into defendant's canal. It is still public water for use by the public. Art. 63, Ch. 81, C. S. 1929. The minute it comes across the boundary line whether in the bed of the stream or in defendant's canal it comes under the jurisdiction of Nebraska authorities. As was well said by counsel Wyoming was through with these waters and they were on their way out of the state when defendant took possession of them not for any Wyoming use, such as would have been the case if a power plant had been erected at the same point to furnish power to Wyoming mills and to light Wyoming cities, but defendant took possession of them for the sole purpose of conveying them to Nebraska to be used in irrigating Nebraska farms. Wyoming authorities may of course regulate the head gate. Presumably it will do so for the benefit of the Wyoming users above the Mitchell head gate. If in doing so it trespasses upon the right of Nebraska users there are courts which have jurisdiction of the controversy that may arise. A suit has already been filed in the Supreme Court of the United States for that purpose. But the accidental circumstances that these waters are diverted out of the North Platte river in Wyoming should not and does not prevent the Nebraska authorities from exercising the same jurisdiction and control over the Mitchell District that it exercises over other districts. It is of course fundamental law that in doing so it cannot cross over the state line. It does not seem necessary for it to do so. Defendant is a Nebraska corporation; and the res, the waters, have entered the state. Nebraska can take control of them when they enter the state and divert them back into the bed of the river if such course is

necessary. It can also act in personam on defendant district and its officers. It can also go into the courts of Wyoming where under the rules of comity this decree can be enforced. The finding on this branch of the case is for the plaintiff and a decree may be drawn as comprehensive as necessary, granting the prayer of plaintiff's petition and putting this district completely under the jurisdiction of the state and giving the state authorities plenary powers to the full extent given by the statute.

The controversy between the defendant and the intervener presents a more difficult and of course a much more important problem. Undoubtedly especially in dry years a priority of water rights is of tremendous importance. One cannot help but approach the solution of this question with a deep sense of responsibility and with a feeling of trepidation. It is one of those cases where one is thankful that there is a Supreme Court to review and correct any mistake the District Court may make. One who has himself been brought up on a farm and who went through the drought years of 1893 and 1894 when whole communities were praying for rain and stood helplessly by while their crops which was their life sustenance shriveled up and were destroyed cannot render a decision which may deprive thousands of acres and hundreds of farms of an adequate supply of water without the most serious feelings. However the law commits that duty to the courts. It has already been established that priority in time is priority in right. The fact that vast interests are at stake, that thousands may be disastrously affected does not change the legal principles which govern. A case involving small interests and comparatively unimportant may present legal questions of more difficulty. Yet when large property interests and the fate of many rest on the outcome the courts naturally proceed with much greater caution and examine into the laws with much greater care.

I do not subscribe to the doctrine that the District Court of Scotts Bluff county does not have jurisdiction of this controversy. This case in its simplest form is nothing more than a controversy between defendant and intervener concerning which has the prior right to the water. Defendant emphasized the difficulty of enforcing a decree if one is rendered but I do not believe there will be very much difficulty along this line. While it is true as said above that Nebraska authorities cannot regulate the head gate, yet if a decree is entered in favor of intervener and establishing that it has the prior right such decree can be enforced either in personam or by taking direct possession of the waters. Defendant adverted to disadvantages that would accrue to it with reference to appropriators above the river from it. I do not doubt that the suit now pending before the Supreme Court of the United States will eliminate most of these difficulties.

That suit will establish the proportionate amount of water each state is entitled to. The fact that all the users of water from the North Platte valley are not before the court cannot deprive the court of the right to decide between the two who are before the court.

Therefore I feel and hold that the court has jurisdiction. The claim that the suit in the United States Supreme Court supersedes the District Court of Scotts Bluff county in this case is, in my judgment, without merit. An examination of the bill in that case discloses that while it asks the court to determine priorities, such will be done as was said by counsel during the oral argument, simply for the purpose of totaling all priorities in Wyoming against the totals in Nebraska for administrative purposes by the irrigation departments in the two states. The states themselves and not the respective parties are before the court in that case. I doubt if the Supreme Court of the United States in that case will decide between the conflicting claims of defendant and intervenor or even permit them to intervene in that case. It seems to me more likely that if they ask to intervene that the Supreme Court would direct defendant and intervenor to settle their rights in a suit between themselves especially in view of the fact that these waters are Nebraska waters being waters that are on their way out of Wyoming, not claimed by Wyoming, and not considered in the suit before the United States Supreme Court as Wyoming but as Nebraska waters.

We then come to the very important question as to the prior right to these waters. The first important question presented in this connection relates to the plea of res judicata on account of the case of Enterprise Irrigation District v. Tri-State Land Company, reported in 92 Nebr. 121, 138 N. W. 171. This plea and the various arguments and claims made pertaining to it require a careful and critical examination of the pleadings, decree, briefs, opinion and mandate in the Enterprise case. Let me say before taking up a discussion of that case that if the matter were presented now as an original proposition one might feel pretty strongly that Judge Hobart's decision was right especially in view of the second point in the syllabus in Kearney etc. Co. v. Alfalfa Irr. Dist., 97 Nebr. 139, 149, N. W. 363.

However, Judge Hobart's decision was reversed in the Enterprise case and if that case is res judicata of the present case or if the principle of stare decisis is applicable then the courts and parties are alike bound and the rights of the parties having been determined by the former adjudication remain as so fixed.

Turning now to an examination of the Enterprise case. Judge Letton says at the very beginning of his long opinion that "When the issues were finally made up, it appeared that plaintiff and each of

the defendants except the Tri-State Land Company and the Farmers Mutual Canal Company were interested in having the prayer of the petition granted, and that practically the same relief is sought by each of them against the two defendants named.....Throughout the opinion, therefore, for convenience, the two latter named companies will be designated as defendants and all the other parties as plaintiffs."

There was therefore in the Supreme Court a direct controversy between the defendant and cross-petitioner in that case, Mitchell Irrigation District and defendant Tri-State Land Company, the predecessor of intervenor. Simplifying the matter by eliminating all the other parties we have a case in which Mitchell Irrigation District was plaintiff and Tri-State Land Company defendant, in which plaintiff after a statement of the facts upon which it relied sought the following relief as appears from the prayer of its cross-petition, to-wit:

"WHEREFORE this cross petitioner prays:

1st: That a decree be entered herein determining and adjudicating the respective amounts of water that the parties to this action have acquired a right to appropriate from said river and the relative rights of appropriation.

2nd: That it be adjudged and decreed that this cross petitioner has acquired a right of appropriation from the North Platte River to the extent of 240 cubic feet of water per second of time continuously flowing during each and every irrigation season with a priority dating from the 20th day of June, 1890; that said right is prior to the right of appropriation of the Farmers Mutual Canal Company and its grantors with the exception of 28 cubic feet of water per second of time, and that the title to said right of appropriation of this cross petitioner be quited and confirmed in this cross petitioner as against all the parties to this action and to each of them, and that the cloud cast on this cross-petitioner's title by reason of the opinion of the Secretary of the State Board of Irrigation and the resolution of said Board confirming said opinion be removed." The defendant in the same case did not file a cross-petition or pray for any relief.

The trial court dismissed the cross-petition of the Mitchell Irrigation District on the ground that it did not have jurisdiction of the subject matter because the head gate of its canal was in Wyoming and also found against the contentions of the Tri-State Land Company except as to the 28 second feet of water and enjoined all the parties including the Mitchell Irrigation District from interfering with its right to that much water. Following the course of the case in the Supreme Court: The Tri-State Land Company appealed to the Supreme Court

and the Mitchell Irrigation District (and many others) were taken to the Supreme Court as appellees. The Mitchell Irrigation District attempted to take a cross-appeal and in my judgment did so. No question was ever raised at the time as to the validity of its cross-appeal. It was designated both as appellee and as cross-appellant in the Supreme Court. I do not believe that the failure of appellee to file its praecipe in the time designated by the rules was jurisdictional or fatal to its appeal. In any event it was before the court as an appellee. Furthermore it seems to me that it is estopped at this time and after appearing in the Supreme Court in the capacity of cross-appellant and demanding relief as a cross-appellant to now say that the court never acquired jurisdiction to determine its cross-appeal.

We then have these two parties before the Supreme Court, the appellant Tri-State Land Company and the appellee and cross-appellant demanding the relief quoted above from the prayer of its answer and cross-petition. The Supreme Court without discussing the correctness of Judge Hobart's holding that the court did not have jurisdiction of the subject matter of cross-appellant's cross-petition and without dismissing the cross-appeal in so many words, sustained the appeal and contentions of the Tri-State Land Company, found that it was entitled to 1142 second feet instead of 28 only with priority dating from September 16, 1887. This in my judgment amounted to a dismissal with prejudice of the cross-petition of the Mitchell Irrigation District and a finding that even as against it the Tri-State Land Company had priority to 1142 second feet. If we stopped here we could not escape I believe from the conclusion that the rights of the Mitchell District and Tri-State Land Company were finally adjudicated in the Enterprise case and that the priority of the latter company was forever established. This was evidently the opinion of the plaintiff and cross-petitioner also as appears from an examination of their motion and brief for re-hearing and by the fact that they applied for a writ of error to the Supreme Court of the United States. That court also indicates that the decision and opinion of the State Supreme Court was final adjudication of the respective rights of the parties. See Enterprise Irrigation District vs. Farmers Mutual Canal Company, 243 U. S. 157, 37 Sup. Ct. Rep. 318. However the statement in the opinion of the Supreme Court of the United States that "all parties to this suit, or their predecessors in interest appeared before the secretary of the board, at the times and places indicated in the notice, and presented such evidence as they deemed appropriate in support of their respective claims" does not apply to the Mitchell District since it did not appear before the secretary. Furthermore the Supreme Court of the United States dismissed the appeal for want of jurisdiction, on the ground that two questions were presented, one Federal and the other, the estoppel, non-Federal, that the non-Federal question, the estoppel,

was sufficient alone to sustain the action of the Nebraska Supreme Court, that it could not examine the correctness of the holding on that question since it presented no Federal question that there was therefore no occasion to examine the Federal question since sustaining plaintiffs in error's contentions with reference thereto would not affect the result. It therefore held that it did not have jurisdiction of the controversy and dismissed the writ of error.

Turning again to our examination of the case in our own Supreme Court it appears that defendant complained in its cross-appeal to the Enterprise case that the effect of the decree in the District Court taken as a whole was to deny that the Mitchell Irrigation District had any right of appropriation at all as against any of the other parties to the action since it decreed a distribution of all of the water of the stream to the other parties to the action and enjoined the Mitchell District from doing any act or thing to interfere with such order of distribution although it was admitted throughout the case that its rights were senior to several of its co-defendants. The District Court however did find that the Mitchell District did post notice at the point of diversion on June 20, 1890, and found the other facts pertaining to the Mitchell District. The Supreme Court makes no mention in its opinion or mandate of the cross-appeal of the Mitchell District and evidently did not determine directly the point raised by it. The court seems to have become completely engrossed in its examination of the claim of the Tri-State Land Company that its right was 1142 second feet instead of 28 second feet. I would take the decision of the Supreme Court to establish that the Tri-State had the right to 1142 second feet as against all the other parties in the case. The claim of the Mitchell District in its cross-appeal that its priority was never determined and that it was enjoined in favor of appropriators with junior rights seems to have escaped the attention of the court in its examination of the other questions involved. But inasmuch as the Supreme Court reversed the case as to the defendant Tri-State Land Company which was not a cross-petitioner and dismissed the action the effect was to wipe out the entire decree of the District Court and to establish but one thing in my judgment, viz: that the Tri-State Land Company had a priority to 1142 second feet of water dating from September 16, 1887, as against all the other parties to the action. The Supreme Court refused to determine the controversy as between plaintiff and the various cross-petitioners but dismissed without prejudice as to such controversies if any existed. Therefore although the cross-appeal of the Mitchell District was not directly determined the obnoxious injunction about which it complained in its brief in the Supreme Court was dissolved. And as I understand it its priority as of June 20, 1890, has never been questioned, nor its relation to any of the other appropriators except only the claim made in this suit by

intervener to the effect that intervener has an appropriation of 1142 second feet dating from September 16, 1887. It would seem that in a matter of such vital importance specific mention would have been made either in the opinion, the mandate or in the judgment entered in the District Court pursuant to the mandate. Furthermore there is language in Judge Letton's opinion in the Enterprise case which does not apply to the Mitchell Company and which might indicate that the rights of Mitchell Company were not considered by the Supreme Court. In view of such language one might hesitate to find that the conflicting rights of the defendant and intervener were finally determined in the Enterprise case. However, in spite of these statements in the opinion it seems almost certain that the claims of the Mitchell Irrigation District were considered by the Supreme Court and that the Supreme Court placed it in the same category with reference to intervener's claim as the plaintiff and other cross-petitioners. It seems almost certain that if it did not do so it would have so stated some place in the course of the opinion or would have dismissed the Mitchell District's cross-appeal without prejudice or if it did not consider that it had jurisdiction over the subject matter of the action in so far as it pertained to the Mitchell District's cross-petition that it would have so stated and dismissed its cross-appeal and cross-petition on that ground. If it intended to place the Mitchell Irrigation District in a different category on account of its claim never having been adjudicated by the state board of irrigation it certainly would have said so especially on the filing of the motion for re-hearing. In such case it seems certain that none of the costs would have been taxed against the Mitchell District whereas the fact is that the costs in the Supreme Court were taxed against all of the parties referred to by Judge Letton as plaintiffs.

But even if one might hesitate to hold on this record that the priorities between defendant and intervener were not finally determined in the Enterprise case there is another principle, that of stare decisis, which it seems to me, determines the case against defendant. "Stare decisis" is a name given to the doctrine that, when the court has once laid down a principle of law as applicable to a certain state of facts, it will adhere to that principle, and apply it to all future cases where the facts are substantially the same." *Moore v. City of Albany*, 98 N. Y. 396, 410; *Hart v. Metropolitan St. Ry. Co.*, 72 N. Y. Supp. 797, 65 App. Div. 493."

The advancement of a new argument not presented or considered in the original case does not prevent application of the principal of stare decisis unless the original decision was legally indefensible and palpably wrong. *Hall v. City of Madison*, 107 N. W. (Wis.) 31.

In *Hill v. Atlantic and N. C. R. Co.* 9 L. R. A. N. S. (N. C.) 606

it was held that: "A judicial interpretation of the words in a railroad charter permitting the corporation to 'farm out' the right of transportation is stare decisis, and binding in a subsequent case, although the latter is between different parties."

"The rule of 'stare decisis' applies with special force to an opinion prescribing rules for the location of survey lines, handed down several years ago, as it must be presumed that since it was delivered, many surveys have been made, grants issued, and title confirmed under its authority and it has thus become a part of the practical construction of many thousands of grants and conveyances." Morgan v. Renfro. 99 S. W. 311, 314, 124 Ky. 314.

"Res Adjudicata binds parties and privies; while stare decisis governs the decision of the same question in the same way in an action between strangers to the record." Marguerita Coal Co. v. Meadow River Lumber Co., 127 S. E. 644, 98 W. Vs. 898.

A case more illustrative as to facts is City of Buffalo v. Erie R. Co., 144 N. Y. S. 578, 83 Misc. Rep. 144, wherein it was said:

"In a city's action against a railroad to enjoin its exclusive use of a strip of land intersecting a number of streets, and to establish a public right of crossing, where the controlling facts were the same as in a previous action in respect to only one of such streets, wherein it was determined that the city had no right of crossing, the doctrine of stare decisis applied, and the defendant was entitled to its benefit; the doctrine being that, when a court had once laid down a principle of law as applicable to a certain state of facts, it will adhere to that principle and apply it to all future cases where the facts are substantially the same, as making for the certainty and stability of the law."

I see no reason why the principle is not decisive of the case before me. In most cases the principle of stare decisis is applied to controversies where the parties to the former adjudication are different than in the case then before the court and where the facts are similar but not identical. Here the exact facts with regard to intervenor's claimed priority were before the Supreme Court in Farmers Irr. Dist. v. Frank, 72 Nebr. 136, 100 N. W. 286 and in Enterprise Irr. Dist. v. Tri-State Land Company, 92 Nebr. 121, 138 N. W. 170. In the Frank case the controversy was between William Frank who had attempted to perfect an appropriation and establish an irrigation district covering a part of intervenor's present district. The facts upon which intervenor now relies were before the court in that case and fully sustained by the court and intervenor's priority established as of September 16, 1887. In the Enterprise case intervenor's claims were again before the court and in an opinion covering many pages were sustained by the court. It is true that in the Frank case a situation similar to that occupied by the Mitchell District was not before the

court but the court did hold that the long delay in the prosecution of intervener's works did not divest it of its priority. The same facts were before the court that are now relied upon by the Mitchell District to divest defendant in this case of its priority as against the Mitchell District. And if the Supreme Court held that such facts did not destroy its rights as against Frank how could it hold that they destroyed its rights as to the Mitchell District? In the Enterprise case the same parties or their privies were before the court as are here before the court. Even if it should be held that the Mitchell District was not bound by the adjudication by reason of the principle of res judicata yet the same claims were then urged to destroy intervener's priority that are here urged and that were urged in the Frank case. Nevertheless the court held that intervener had a priority dating from September 16, 1887, for 1142 second feet of water. There is nothing in my judgment which places the Mitchell District in a better situation than that of the plaintiff and various cross-petitioners in the Enterprise case. It is true that it had not come before the state board of irrigation and sought to establish its claim. This fact is not in my judgment of any importance. If it had appeared and if its claim had been established in accordance with its present contentions as it probably would have been it would still date only from June 20, 1890. Intervener's priority would still date from September 16, 1887. It is the date of priority of intervener's appropriation which was established by the State Board, the Frank case, and the Enterprise case. Such date of priority stood in face of the facts urged against it in the two former opinions referred to. If the Mitchell District claimed an earlier appropriation than September 16, 1887, there would be something before the court that has not been determined but since intervener's appropriation stands as of that date and has stood as against two prior assaults and since the Mitchell District does not claim an earlier but a later date it would seem futile for me to try to override the Supreme Court by holding that regardless of the holdings in the Frank case and the Enterprise case, nevertheless the long delay in completing its works, destroyed intervener's priority so that it is not valid as to the Mitchell District.

I will now refer to several other contentions made by defendant. It contends that the rights of the parties were fixed when the 1889 law was passed, that intervener lost any advantages accruing prior to the 1889 law by failing to proceed unless interrupted by "snow or rain." That it was required to proceed under the 1889 law within 90 days which it failed to do. The answer to these contentions is that all these matters were involved in the Enterprise case and settled adversely to defendant.

In regard to defendant's contention that there was no controversy between the defendant and intervener in the Supreme Court in the

Enterprise case I think that a reference to the prayer of defendant's cross-petition above quoted disposes of that contention. It is true as counsel stated that if the Supreme Court held that the findings of the state board were valid then the injunction about which defendant was complaining in the Enterprise case had to be vacated and counsel go on to say that there was therefore no necessity for any finding as to the Mitchell District and that there was no reference to the cross-appeal in the opinion and it was not considered. It is true that there was no reference to the cross-appeal in the opinion, but it does not seem possible that the Supreme Court found that intervenor had a priority to 1142 second feet dating from September 16, 1887, without finding against the contentions of the Mitchell District one of which was that although it had posted its notices several years later, viz: one, June 20, 1890, nevertheless it was prior to intervenor on account of intervenor's delay, non-user and other facts set forth in its cross-petition, which were discussed by the Supreme Court and held not to destroy the priority of intervenor, at least as to the plaintiff and other cross-petitioners who were making the same claim. While the Supreme Court does not refer specifically to the Mitchell District's claim it established intervenor's priority to 1142 second feet of water as of September 16, 1887, and it could hardly have done so without disposing of defendant's contention in the Enterprise case that although defendant had made its postings on June 20, 1890, and had a priority from that date only, yet it was "prior to the rights of appropriation of the Farmers Mutual Canal Company and its grantors with the exception of 28 cubic feet of water per second of time," because of the facts referred to in its cross-petition in the Enterprise case and discussed at great length in Judge Letton's opinion.

Defendant criticizes the doctrine of estoppel as announced in the Enterprise case and it seems to me that such criticism is well taken but that does not prevent it from being the law of the case. Courts are not perfect and opinions are rendered from time to time that seem on further consideration to be illogical and even unjust but that is a weakness that is inherent in the administration of all human affairs. Defendant further contends that it has acquired rights by prescription since the decision in the Enterprise case. It does not seem to me that the evidence established that such is the case. A similar contention and based on similar facts was made in Masterson vs. Kennard, 12 Pac. (2nd) 560. However the Oregon court held that there was no adverse user and a careful reading of the opinion convinces me that as to this point the Oregon court was right, and I believe the case establishes a precedent that should be and will be followed in Nebraska.

Counsel calls attention to the provision in paragraph 11 of the Warren Contract to the effect that intervenor accepts the storage

water "in full satisfaction of all its rights to the water of the North Platte River, both natural flow and surplus storage." As suggested by counsel for intervener defendant is not a party to the Warren Contract and cannot therefore take advantage of it, and he makes the further suggestion that it has never been construed between the parties to it as binding intervener to take the storage waters in lieu or in full of natural flow.

Other contentions were of course made in the long and able arguments but I think the answer to them is contained in what has already been said or at least are disposed of by what has been said. In any event it has been my purpose to consider all the arguments made by defendant and I do not believe there are any of importance that I have failed to consider although it may be that I have failed to mention them.

It therefore seems necessary for me to find and hold generally in favor of intervener and a decree may be drawn to that effect. Counsel having announced in open court that a decree establishing intervener's priority to 905 second feet including storage water will be satisfactory the decree may limit its priority to that amount. In my judgment separate decrees should be drawn, one in the controversy between plaintiff and defendant, and one in the controversy between intervener and defendant.

Dated this 8th day of November, 1934.

Respectfully submitted,
LOUIS LIGHTNER,
District Judge.

IN THE DISTRICT COURT OF SCOTTS BLUFF COUNTY, NEBRASKA

The State of Nebraska,
ex rel C. A. Sorensen,
Attorney General,
Plaintiff,
vs.
Mitchell Irrigation District,
a Corporation,
Defendant
Farmers Irrigation District,
Intervener. } JOURNAL ENTRY

NOW, on this 13th day of December, 1934, this cause, having heretofore been tried and submitted to the Court and taken under ad-

visement, came on for decision on the pleadings and issues joined between the Intervener and cross-petitioner, Farmers Irrigation District, and the Defendant, Mitchell Irrigation District, and the evidence, and the Court being fully advised in the premises finds generally for the Intervener and Cross-petitioner, Farmers Irrigation District, and against the Defendant, Mitchell Irrigation District, and that the allegations of the Amended and Supplemental Cross-petition of the Farmers Irrigation District are true; and that the prayer of said cross-petitioner should be granted.

WHEREFORE, IT IS CONSIDERED, ORDERED AND ADJUDGED by the Court that the appropriation of water from the North Platte River now owned and held by the cross-petitioner, Farmers Irrigation District, and known as Docket No. 918 on the records of the former Department of Public Works of the State of Nebraska, now known as the Department of Roads and Irrigation of said state, be, and the same hereby is, adjudged and decreed as a valid and subsisting appropriation for the amount of 905 cubic feet of water per second of time, with a priority date of September 16, 1887.

IT IS FURTHER CONSIDERED, ORDERED AND ADJUDGED that said appropriation of said Farmers Irrigation District is prior in time and right to any appropriation the defendant, Mitchell Irrigation District, may have, or claim to have, and that said cross-petitioner, Farmers Irrigation District, is entitled to and has the right to divert and use said water at said rate of diversion, prior and in preference to the right of defendant to divert and use any water from said North Platte River.

IT IS FURTHER CONSIDERED, ORDERED AND ADJUDGED that the right of cross-petitioner to the prior use of 905 cubic feet of water from the North Platte River as against the Mitchell Irrigation District be, and the same hereby is, quieted and confirmed in cross-petitioner.

IT IS FURTHER CONSIDERED, ORDERED AND ADJUDGED that defendant, Mitchell Irrigation District, has no right to the use of storage water flowing in said river which shall be released from the Pathfinder or Guernsey Reservoirs constructed in said river for the purpose of supplying 52 cubic feet of water per second of time under cross-petitioner's appropriation known on the records of the Department of Roads and Irrigation, aforesaid, as Docket (Application) No. 660 and having a priority date of April 14, 1902.

IT IS FURTHER CONSIDERED, ORDERED AND ADJUDGED that the defendant, Mitchell Irrigation District, its officers, agents, employees, successors and assigns be, and hereby are, perpetually enjoined:

1. From diverting any water from the North Platte River into said defendant's canal, by or through its headgate and diversion works or otherwise;
2. From conducting any water through its said canal into the State of Nebraska and delivering such water through its canals, laterals or irrigation system to any landowner, or landowners, within its said district for use in the irrigation of their said land; and
3. From permitting any water from said river to be diverted from said river into its canal or conducted through its canal or laterals for the purpose of irrigating any of the lands within said district during any irrigation season, towit, from May 1st to October 1st of each and every year hereafter, and also during the time of any extension of such irrigation seasons by action of the water users under cross-petitioner's ditch, as provided by Sec. 46-609, compiled Statutes of 1929;

Provided, however, at such times, and for such periods of time as there is at least 905 cubic feet of water per second of time flowing in the river past the defendant Mitchell Irrigation District's headgate and diversion works, together with a sufficient quantity in addition thereto to supply cross-petitioner at its headgate and diversion works with the full amount of 905 cubic feet per second of time under its appropriation known as Docket 918, as aforesaid, and having a priority date of September 16, 1887, defendant may divert and use water so long as it does not interfere with cross-petitioner's right as herein found.

Provided further that at such times as the Department of Roads and Irrigation of the State of Nebraska, acting through its duly constituted officers, shall determine that cross-petitioner and the land-owners within cross-petitioner's district, or whose lands are irrigated from cross-petitioner's canal, are unable to make beneficial use of said quantity of water, or some part thereof, said department may, following such determination, authorize the defendant to divert and use water, and the diversion and use of water by said defendant with the express authority of the Department of Roads and Irrigation, or its duly constituted officers, under the conditions named shall not constitute a violation of the foregoing part of this injunction.

IT IS FURTHER CONSIDERED, ORDERED AND ADJUDGED that defendant, Mitchell Irrigation District, its officers, agents, employees, successors and assigns be perpetually enjoined from diverting from said river into its canal or from conducting through its canal or from permitting to be used on lands within its district any storage water released from Pathfinder or Guernsey reservoirs for the purpose

of supplying or supplementing cross-petitioner's, Farmers Irrigation District, appropriation, known as Docket (Application) No. 660 on the records of the Department of Roads and Irrigation of the State of Nebraska, and having priority date of April 14, 1902.

IT IS FURTHER CONSIDERED, ORDERED AND ADJUDGED that the terms of this decree are intended to control the rights of the cross-petitioner and the defendant as between themselves; and it is further ordered, adjudged and decreed that all of the rights of the defendant to divert, receive and use water shall be governed and controlled in all respects other than in relation to cross-petitioner, by the decree entered in this cause, of even date herewith, in relation to the controversy as between plaintiff and defendant.

IT IS FURTHER CONSIDERED, ORDERED AND ADJUDGED that the application of the defendant, Mitchell Irrigation District, made in open court upon the rendition of this decree for an order permitting the defendant to supersede the decree of this Court in this cause, and to fix the amount, terms and conditions of a supersedeas bond be, and the same hereby is, denied. Request for special findings except as they were made in written opinion of court filed November 9th, 1934, overruled. Defendants except. All costs taxed to defendant.

BY THE COURT:

LOUIS LIGHTNER,
Judge.

IN THE DISTRICT COURT OF DAWSON COUNTY, NEBRASKA

The State of Nebraska, ex
rel., Assad Maloley, et al.,
Relators,
vs.
Dawson County Irrigation
Company, a Corporation,
Respondent.
Department of Roads and
Irrigation of the State of
Nebraska,
Intervenor.

JOURNAL ENTRY

And now on this 24th day of May, 1934, that being one of the days of the regular May, 1934 term of the District Court in and for Dawson County, Nebraska, the above entitled cause came on for trial to the Court upon the petition of the relators, the answer of the respondent, the petition in intervention of the intervenor and the answer of the relators to the petition in intervention, and all parties being present in Court by their attorneys, the taking of evidence is

commenced and is concluded and all parties rest, and said cause is argued to the Court by counsel for the respective parties and said cause is submitted to the Court. On consideration whereof, the Court finds generally in favor of the relators and against the respondent and against the intervenor. The Court further finds that the land described in the petition is all within Water Appropriation Docket No. 622, having a priority date of June 26, 1894, as adjudicated by the State Board of Irrigation on March 4, 1897. The Court further finds that the lands described in the petition were included within the Claim Affidavit No. 183 filed by the Farmers and Merchants Irrigation Company, claimant, pursuant to the order of the State Board of Irrigation and the provisions of the irrigation act of 1895. That in adjudicating said claim, the State Board of Irrigation, as shown by the opinion of W. R. Akers, State Engineer, of date March 4, 1897, allowed the claim without exception and adjudicated that the lands described in the petition were within said Water Appropriation Docket No. 622 and that the fact that said lands described in the petition were not specifically described in Paragraph 9 of said opinion of W. R. Akers, State Engineer, entered March 4, 1897, did not amount to an exclusion of said lands from said appropriation or an adjudication that said lands were not within said appropriation. The Court further finds that the said lands described in the petition are in fact within said Water Appropriation Docket No. 622, having a priority date of June 26, 1894, and are entitled to receive water under said priority date and that the relators are entitled to receive water for irrigation purposes from the canals of the respondent for the lands described in the petition on the same basis that other lands described in the petition on the same basis that other lands under said Water Appropriation Docket No. 622 receive water and without any discrimination against relators' said lands. The Court further finds that a peremptory writ of mandamus should issue herein forthwith directed to the respondent, Dawson County Irrigation Company, commanding the respondent to furnish water for irrigation purposes to the following described lands, to-wit: The Southeast Quarter of Section 8, the Northeast Quarter of Section 8, all that part of Section 17 lying north of the Union Pacific Railroad, the east 160 acres of the north 226.32 acres of Section 16, the Southeast Quarter of Section 6, the east 120 acres of the Southeast Quarter of Section 9, and the Southwest Quarter of Section 8, and all in township 9 North, Range 20, West, and the Northeast Quarter of Section 20, in Township 10 North, Range 20, West, and all said land being in Dawson County, Nebraska; said water to be furnished under water Appropriation Docket No. 622, having a priority date of June 26, 1894, and when water is available in said canal for use upon lands under said Water Appropriation Docket No. 622, upon payment to respondent of the proper fees and charges therefor, and that no discrim-

ination be made in the furnishing of water between the said lands above described and other lands under said Water Appropriation Docket No. 622, having a priority date of June 26, 1894.

IT IS, THEREFORE, CONSIDERED AND ADJUDGED BY THE COURT that a peremptory writ of mandamus issue against the said Dawson County Irrigation Company, respondent, commanding it to furnish water for Irrigation purposes to the following described lands, to-wit: The Southeast Quarter of Section 8, the Northeast Quarter of Section 8, all that part of Section 17 lying north of the Union Pacific Railroad, the east 160 acres of the north 226.32 acres of Section 16, the Southeast Quarter of Section 6, the east 120 acres of the north 226.32 acres of Section 16, the Southeast Quarter of Section 6, the east 120 acres of the Southeast Quarter of Section 9, and the Southwest Quarter of Section 8, and all in Township 9 North, Range 20, West, and the Northeast Quarter of Section 20, in Township 10 North, Range 20, West, and all said land being in Dawson County, Nebraska; said water to be furnished under Water Appropriation Docket No. 622, having a priority date of June 26, 1894, and when water is available in said canal for use upon lands under said Water Appropriation Docket No. 622, upon payment to respondent of the proper fees and charges therefor, and that no discrimination be made in the furnishing of water between the said lands above described and other lands under said Water Appropriation Docket No. 622, having a priority date of June 26, 1894. The Court further adjudges that the land described in the petition is all within Water Appropriation Docket No. 622, having a priority date of June 26, 1894, as adjudicated by the State Board of Irrigation on March 4, 1894. The Court further adjudges that the lands described in the petition were included within the Claim Affidavit No. 183 filed by the Farmers and Merchants Irrigation Company, claimant, pursuant to the order of the State Board of Irrigation and the provisions of the irrigation act of 1895. That in adjudicating said claim, the State Board of Irrigation, as shown by the opinion of W. R. Akers, State Engineer, of date March 4, 1897, allowed the claim without exception and adjudicated that the lands described in the petition were within said Water Appropriation Docket No. 622 and that the fact that said lands described in the petition were not specifically described in Paragraph 9 of said opinion of W. R. Akers, State Engineer, entered March 4, 1897, did not amount to an exclusion of said lands from said appropriation or an adjudication that said lands were not within said appropriation. That the respondent pay the costs of this action taxed at \$..... To all of which findings and judgment of the Court, the intervenor, Department of Roads and Irrigation of the State of Nebraska, excepts.

District Judge.

Bridgeport, Nebraska,
November 21, 1934.

Mr. R. H. Willis, Chief,
Bureau of Irrigation, Water Power and Drainage,
Department of Roads and Irrigation,
Bridgeport, Nebraska.

Dear Mr. Willis:

Your question as to whether the Bureau of Irrigation, Water Power and Drainage of the State of Nebraska is authorized and empowered by law to administer the waters of the state with reference to the rights of riparian owners presents one of the most vexatious questions that arises in connection with the administration of water. There are many who contend that it is one of the functions and duties of the Bureau to police riparian rights and to protect riparian owners in their use of the water of the several streams of the state. If this is the law, it would mean that the Bureau would have a police force scattered throughout the state. It would further mean that the priorities of riparian owners on the several streams within the state would have to be adjudicated, or at least it would require an investigation on each complaint as to priority.

In the case of Crawford Company vs. Hathaway, et al., 67 Neb. 325, 93 N. W. 781, the court held that the board created under the irrigation act of 1895 was possessed of powers of administrative character, and that the courts were in no way ousted out of their jurisdiction over actual controversy. Also that—

"The courts have judicial powers, and, while the board may make all needful preliminary determinations to enable it to regulate the distribution of water, and may determine whether or not proposed appropriations shall be allowed, and in what order, in pursuance of the provision of the statute subject to the right of appeal, whenever a controversy arises over the substance of the rights of various parties making use of a stream, such controversies are proper for the courts to take judicial cognizance of. The courts cannot administer the statute, nor regulate the use of the stream, but they can and should adjudicate disputes based on the rights of the parties acquired under the statutes."

Paragraph two of the syllabus is as follows: "The common law rule with respect to the rights of private riparian proprietors has been a part of the laws of the state ever since the organization of a state government."

While I think it was contemplated that the Bureau should, in a measure, have some jurisdiction over the use of the waters of our

streams flowing within the State of Nebraska, yet I cannot conceive where it was ever contemplated that it was incumbent on the Bureau to police the rights of the various riparian owners. If a riparian owner should complain that his rights are being interfered with, he has recourse to our courts, who have ample power to protect him. In the body of the opinion of the Crawford Company vs. Hathaway case, the court says:

"But there the board has made no determination, and a large number of persons are claiming the right to divert and use the water of a stream, some by appropriation under the statute, and some under prior acts, some by prescription, and others as riparian owners whose rights have accrued prior to the statute, and have not been divested, we know of no sound reason why a suit in equity to determine and adjust such rights and enjoin interference of those rights by others under a claim of right may not be maintained. Such suits are permitted everywhere where the system of appropriation adopted by our statute obtains. In some states they have been provided by statute, but, in the absence of statutes, they have been upheld under general principles of equity jurisdiction."

It has always been my opinion that the Department of Roads and Irrigation should adjudicate priorities, and, further, that it has adjudicated priorities of appropriations for irrigation purposes, and further, that it has authority to close down headgates in order of priority to protect prior appropriators when there is a deficiency in the flow of any stream, but to say that a riparian owner whose rights have not been determined, either by statute or adjudication, has the right to call upon the Department to protect him in the use of water flowing through or adjacent to his land would be to invite trouble.

I am therefore of the opinion that in a dispute of this kind that the Bureau is without authority to attempt to adjudicate rights of riparian owners on the several streams within the State of Nebraska.

Respectfully,

PAUL F. GOOD,

Attorney General.

By C. G. Perry,

Special Assistant.

**DIVISION OF
HYDROGRAPHY AND SURVEYS**

DESCRIPTION OF GAGING STATIONS

PATHFINDER RESERVOIR, WYOMING

LOCATION:—The dam, constructed of granite masonry, is located in the channel of the North Platte River, in Section 24, Township 29 North, Range 84 West, three miles below the mouth of the Sweet Water. Its capacity at spillway elevation, 5852 feet above mean sea level, is 1,070,000 acre-feet, at which elevation it submerges an area of about 22,000 acres. The outflow is measured one-quarter mile below the dam, where a foot bridge has been installed.

ELEVATION OF OVERFLOW WEIR:—5852.00 feet above mean sea level.

DISTANCE FROM RESERVOIR:—About one-quarter mile below dam.

DRAINAGE AREA:—10,700 square miles.

CHANNEL:—Very narrow and through solid granite.

GAGE:—Chain at north bank near foot bridge.

RECORDER:—Automatic recorder.

OBSERVER:—Observations made and discharges furnished by the United States Bureau of Reclamation.

RECORDS AVAILABLE:—May 1, 1905, to September 30, 1934.

GUERNSEY RESERVOIR, WYOMING

LOCATION:—The Guernsey Dam is located on the North Platte River near the north line of Section 27, Township 27 North, Range 66 West, about one and one-half miles northwest of the town of Guernsey, Wyoming. The height of dam is 105 feet above river bed and 500 feet in length. It is a sluiced gravel and rock filled structure with the following capacities:

	ELEVATION		ACRE FEET
50 foot level	4380	zero storage	11270
90 foot level	4420	total storage	72700
Top of dam	4486	net storage	61430
North spillway	4370		

ELEVATION OF TOP OF DAM:—4426.00 feet above mean sea level.

DISTANCE FROM PATHFINDER RESERVOIR:—192 miles.

DRAINAGE AREA:—16,200 square miles.

GAGE:—A gaging station is maintained by the United States Bureau of Reclamation a short distance below the Guernsey Dam. An automatic recorder is used in connection with this station. Discharge measurements are made from a cable located about 100 yards below the recorder.

GUERNSEY RESERVOIR, WYOMING—Continued

RECORDER:—Friez automatic recorder installed on the south bank of the river by the United States Bureau of Reclamation.

OBSERVER:—Observations made and discharges furnished by the United States Bureau of Reclamation.

RECORDS AVAILABLE:—October 1, 1927 to September 30, 1934.

NORTH PLATTE RIVER AT WHALEN, WYOMING

LOCATION:—In Section 11, Township 26 North, Range 65 West, at diversion dam at Whalen, 8 miles below Guernsey Dam.

ELEVATION:—Elevation of concrete weir is 4278.50 feet above mean sea level.

DISTANCE FROM PATHFINDER:—200 miles.

DRAINAGE AREA:—16,300 square miles.

REMARKS:—Discharge records obtained by subtracting flow of Interstate and Ft. Laramie canals from flow below Guernsey Reservoir. Usually the Ft. Laramie Canal carries water the year round for the Lingle Power Plant. The flow from the power plant through the tail race back to the river is not included in the discharge at the river weir for this biennium.

GAGE:—The weir is constructed of concrete, is 300 feet in length, and 12.5 feet in height above the river bed.

RECORDER:—Automatic recorder.

OBSERVER:—Observations made and discharge records furnished by the United States Bureau of Reclamation.

RECORDS AVAILABLE:—May 1, 1909, to September 30, 1934.

NORTH PLATTE RIVER AT TORRINGTON, WYOMING

LOCATION:—Concrete highway bridge in Section 15, Township 24 North, Range 61 West, 25 miles below the mouth of the Laramie River. Established April 1, 1926, by the State of Nebraska. Maintained by the State of Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 4180.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—230 miles.

DRAINAGE AREA:—21,700 square miles.

BENCH MARKS:—No. 1 is a cross chiseled in concrete, 12 feet from south end of bridge on downstream handrail. Elevation 18.12 feet. Established February 27, 1931. No. 2 is the heads of two spikes driven horizontally in blaze, 0.5 of a foot above the base of a 12 inch cottonwood tree, 30 feet south and 80 feet downstream from south end of bridge. Elevation 7.70 feet. Established October 16, 1931.

NORTH PLATTE RIVER AT TORRINGTON—Continued

Reference point is slot in screw head in shelter floor. Elevation 8.58 feet.

GAGE:—A gage consisting of a 0-3.3 foot and 2-1 foot enamel sections attached to 2"x6" plank bolted to downstream end of the second pier from the south end of bridge.

RECORDER:—A Stevens Type A-21 continuous recorder, installed March, 1933, in wooden shelter with corrugated iron well, attached to downstream wing-wall at south end of bridge.

OBSERVER:—Carl Gaenslen, Torrington, Wyoming.

RECORDS AVAILABLE:—April 1, 1926 to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—1.51 on June 4, 1934.

LOWEST GAGE READING FOR SEASON:—0.04 on May 16, 1934.

**NORTH PLATTE RIVER AT WYOMING-NEBRASKA LINE
HENRY, NEBRASKA**

LOCATION:—1 and $\frac{1}{2}$ inch steel cable in the NE $\frac{1}{4}$ of Section 10, Township 23 North, Range 60 West, a quarter of a mile above the Wyoming-Nebraska State Line and about 500 feet below the headgate of the Mitchell Canal. Established April 29, 1929. Maintained by Nebraska, Wyoming, and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 4035.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—240 miles.

DRAINAGE AREA:—22,100 square miles.

BENCH MARKS:—No. 1 is top of bolt in concrete on top of cable anchorage on south bank. Elevation 5.04 feet. No. 2 is standard tablet set in concrete post 25 feet northeast of shelter on north bank. Elevation 4.84 feet. Reference point is groove in screw in edge of recorder shelf. Elevation 9.52 feet.

GAGE:—Boxed cantilever chain gage on north bank just below shelter. Chain length is 17.09 feet. This gage changed to north bank April 16, 1932.

RECORDER:—Stevens Type A-27 continuous recorder in shelter on north bank. Installed April 16, 1932.

OBSERVER:—Water Commissioner during the irrigation season.

RECORDS AVAILABLE:—May 1, 1929, to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—2.53 on June 4, 1934.

LOWEST GAGE READING FOR SEASON:—0.17 on May 16 and 17, 1934.

NORTH PLATTE RIVER AT MITCHELL

LOCATION:—Highway bridge near the southwest corner of Section 27, Township 23 North, Range 56 West, three-quarters of a mile south of Mitchell, and 14 miles downstream from the Wyoming-Nebraska Line. Established June 2, 1901. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 3945.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—253 miles.

DRAINAGE AREA:—24,300 square miles.

BENCH MARKS:—No. 1 is cross chiseled in concrete near corner of ledge at approximately floor level on downstream side and at end of south downstream wing wall. Elevation 11.39 feet. No. 2 is the heads of two spikes driven horizontally in 18 inch cottonwood near base, 200 feet downstream from bridge, and ten feet from south bank. Elevation 6.15 feet. Reference point is slot in brass screw head in face of recorder shelf. Elevation 10.86 feet.

GAGE:—Vertical staff consisting of 6-1 foot enamel scales attached to a scantling driven in river bed on downstream side of first pier from south end of bridge, and anchored to pier by 2 $\frac{1}{2}$ inch lag screws 24 inches long in expanding shields.

RECORDER:—Stevens Type A-27 continuous recorder on south bank, 40 feet downstream from south end of bridge. Installed in October, 1927.

OBSERVER:—Water Commissioner during the irrigation season.

RECORDS AVAILABLE:—From June 2, 1901 to July 10, 1913, and April 18, 1916, to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—1.48 on October 6, 1933.

LOWEST GAGE READING FOR SEASON:—0.27 on May 10, 1934.

NORTH PLATTE RIVER AT MINATARE

LOCATION:—West line of Section 18, Township 21 North, Range 53 West, one mile west and one and one-half miles south of Minatare, on concrete bridge consisting of 12-50 foot arches. Established in May, 1916. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 3820.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—270 miles.

DRAINAGE AREA:—24,700 square miles.

NORTH PLATTE RIVER AT MINATARE—Continued

BENCH MARKS:—No. 1 is a cross chiseled in concrete near corner of ledge about 1 foot above floor level on downstream side of wing-wall at south end of bridge. Elevation 11.68 feet. No. 2 is head of spike driven horizontally in blaze near base of 6 inch cottonwood tree, 25 feet downstream. Elevation 4.26 feet. Reference point is slot in screw head in face of recorder shelter. Elevation 9.70 feet.

GAGE:—Outside gage is vertical staff attached to downstream end of south abutment of bridge.

RECORDER:—Stevens Type A-30 continuous recorder in standard wooden shelter on south bank of stream, just below the bridge.

OBSERVER:—Water Commissioner during the irrigation season.

RECORDS AVAILABLE:—May, 1916, to September 30, 1934, with the exception of the year 1920.

HIGHEST GAGE READING FOR SEASON:—1.55 on October 6, 1933.

LOWEST GAGE READING FOR SEASON:—0.06 on May 23, 24, 26, 27, 1934.

NORTH PLATTE RIVER AT BRIDGEPORT

LOCATION:—At concrete highway bridge consisting of 23 spans of 30 feet clear waterway, in Section 28, Township 20 North, Range 50 West, half mile north of Bridgeport. Established in May, 1902. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 3666.00 feet above mean sea level. United States Coast and Geodetic Survey.

DISTANCE FROM PATHFINDER:—293 miles.

DRAINAGE AREA:—25,300 square miles.

BENCH MARKS:—No. 1 destroyed summer of 1932. No. 2 is head of two spikes driven horizontally in cottonwood tree in blaze near base, 20 feet downstream from station (-) 50, at south end of bridge. Elevation 9.02 feet. No. 3 is cross on top of concrete abutment at south end of bridge. Elevation 15.62 feet. Reference point is slot in screw head on face of recorder shelf. Elevation is 13.30 feet.

GAGE:—Staff gage consisting of 6-1 foot sections of enamel scale bolted to concrete on downstream side of south abutment of bridge.

RECORDER:—Stevens long distance recorder, 1917. Sender located in shelter on south bank of stream, 13 feet downstream from

NORTH PLATTE RIVER AT BRIDGEPORT—Continued

bridge. Shelter is attached to abutment wing of wood piling and planking. The recorder is located in the State Irrigation Building. Also Stevens Type A-30 continuous recorder in shelter at river. Installed June 25, 1934.

OBSERVER:—Office Engineer and Water Commissioner.

RECORDS AVAILABLE:—From May, 1902 to 1906, and 1915 to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—6.16 on October 2, 1933.

LOWEST GAGE READING FOR SEASON:—4.56 on July 30, 31, 1934.

NORTH PLATTE RIVER AT LISCO

LOCATION:—Steel highway bridge, consisting of 8-80 foot spans, in Section 33, Township 18, Range 46 West, one-half mile south of Lisco. Established September 9, 1931. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 3540.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—321 miles.

DRAINAGE AREA:—

BENCH MARKS:—No. 1 is cross chiseled in concrete near corner of bridge seat at downstream end of south abutment. Elevation 8.68 feet. No. 2 is top of pier directly above top of staff gage. Elevation 8.84 feet. Reference point is slot in brass screw head in face of recorder shelf. Elevation 12.59 feet.

GAGE:—A vertical staff gage consisting of 0-6.7 enamel scale attached to south side of well.

RECORDER:—Stevens Type A-30 continuous recorder, installed May 4, 1932, in corrugated iron shelter attached to downstream end of first pier from south end of bridge.

OBSERVER:—Water Commissioner during irrigation season.

RECORDS AVAILABLE:—April 10, 1916 to October 31, 1917, and September 9, 1931 to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—2.34 on May 3, 1934.

LOWEST GAGE READING FOR SEASON:—0.28 on August 3, 4, 1934.

NORTH PLATTE RIVER AT OSHKOSH

LOCATION:—Steel truss bridge consisting of 7-98 foot spans, in Section 2, Township 16 North, Range 44 West, about 1½ miles south of Oshkosh. Established March 1, 1928. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 3370.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—348 miles.

DRAINAGE AREA:—27,500 square miles.

BENCH MARKS:—No. 1 is top of reinforcing bar in North downstream corner of first pier from south bank. Elevation 9.22 feet. No. 2 is top of 5/8 inch bolt set in top of south downstream bridge seat. Elevation 9.05 feet. Reference point is slot in screw head set in edge of recorder shelf. Elevation 13.20 feet.

GAGE:—Outside staff gage consisting of 0-6.7 enamel scale attached to pier near shelter.

RECORDER:—Stevens Type A-30 continuous recorder, installed April 23, 1933, in corrugated iron shelter attached to downstream end of second pier from south bank of the stream.

OBSERVER:—Water Commissioner during irrigation season.

RECORDS AVAILABLE:—April 7, 1916 to October 30, 1917, and from March 1, 1928 to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—2.50 on May 4, 1934.

LOWEST GAGE READING FOR SEASON:—0.18 on August 29, 30, 1934.

NORTH PLATTE RIVER AT MARTIN

LOCATION:—Steel and concrete highway bridge consisting of 14-50 foot spans in Section 31, Township 15 North, Range 38 West, 1 mile south of Martin, a siding on the Union Pacific Railroad. Established November 20, 1933. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 3130.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—382 miles.

DRAINAGE AREA:—

BENCH MARKS:—No. 1 is cross on top of downstream end of south abutment. Elevation 14.72 feet. No. 2 is directly below No. 1, and is top of first reinforcing bar anchorage. Elevation 4.83 feet. Reference point is top of handrail directly over trap door in recorder shelf. Elevation 16.21 feet.

GAGE:—Staff gage consisting of 0-6.7 enamel scale fastened to

NORTH PLATTE RIVER AT MARTIN—Continued

2"x6" plank attached by means of one 3/8 inch bolt through the right leg of each band supporting the well.

RECORDER:—Stevens Type A-30 continuous recorder, installed November 20, 1933, in wooden shelter with galvanized iron well attached to downstream end of first pier from south end of bridge.

OBSERVER:—Water Commissioner during irrigation season.

RECORDS AVAILABLE:—November 20, 1933 to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—2.20 March 4, 1934.

LOWEST GAGE READING FOR SEASON:— -0.52 August 14, 1934.

NORTH PLATTE RIVER AT NORTH PLATTE

LOCATION:—Concrete highway bridge consisting of 14 spans, in Section 28, Township 13 North, Range 30 West, one-half mile north of the City of North Platte, and about four and one-half miles above junction with South Platte River. Established February 25, 1895. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 28.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—422 miles.

DRAINAGE AREA:—32,000 square miles. U. S. Geological Survey.

BENCH MARKS:—No. 1 is top of nose of pier on upstream side of bridge, 360 feet from south end. Elevation 10.84 feet. No. 2 is top of bolt in bed plate in downstream end of south abutment. Elevation 10.42 feet. No. 3 is top of bed plate in downstream end of south abutment. Elevation 10.29 feet. No. 4 is top of bed plate, at south end, on downstream end of pier supporting gage shelter. Elevation 10.44 feet. Reference point is slot in head of screw in recorder shelf. Elevation 16.73 feet.

GAGE:—6.7 foot vertical staff gage fastened to the first pier from the south end of the bridge on the downstream side.

RECORDER:—Stevens Type A-27 continuous recorder, in corrugated iron shelter attached to downstream side of first pier from south end of the bridge.

OBSERVER:—A. W. Shilling, North Platte.

RECORDS AVAILABLE:—February 25, 1895 to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—3.91 May 6, 1934.

LOWEST GAGE READING FOR SEASON:—2.27 July 24 and August 11, 1934.

SOUTH PLATTE RIVER AT JULESBURG

LOCATION:—On timber highway bridge with concrete floor in Section 33, Township 12 North, Range 44 West, about one mile south of Julesburg, Colorado. On United States highway Number 51. The river is divided into four channels, numbered one, two, three, and four, beginning with the south channel. During the last four years channel number two has been the most important. Channel number one is silted and carries very little water. Channels three and four are practically dry. During flood periods the four channels become one. Established April 2, 1902. Maintained by State of Colorado, United States Geological Survey, and State of Nebraska.

ELEVATION:—Approximately 3450.00 feet above mean sea level.

DRAINAGE AREA:—20,600 square miles.

BENCH MARKS:—Channel No. 1. No. 1 is a standard brass tablet located between the recorder shelter and the highway. Elevation 8.26 feet. Reference point is slot in screw head in shelter floor. Elevation 10.75 feet.

Channel No. 2. No. 1 is a standard brass tablet set in concrete block located about 75 feet southeast of recorder shelter. Elevation 6.07 feet.

Channel No. 3. No. 1 is two spikes in top of piling farthest from bridge on wing-wall on east side and south end of north span of bridge. Elevation 100.00 feet. Elevation of zero of chain gage 86.57 feet.

Channel No. 4. No. 1 is a standard brass tablet set in concrete block located next to the fence, and about 50 feet upstream from shelter. Elevation 6.16 feet. Reference point is slot in screw head in shelter floor. Elevation 8.41 feet.

GAGES:—Channel No. 1. Cantilever chain gage 4 feet downstream from shelter, 17.58 feet long.

Channel No. 2. Cantilever chain gage 16.13 feet long, 6 feet downstream from shelter.

Channel No. 3. Chain gage on downstream side of highway bridge about 50 feet north of south end of span over channel number three, 17.28 feet long.

Channel No. 4. Cantilever chain gage 10 feet below shelter, 17.15 feet long.

RECORDERS:—Channel No. 1. A 6-inch Stevens Type L recorder in small wooden shelter about 300 feet downstream from highway bridge on south bank of channel number one.

Channel No. 2. Stevens Type A-30 continuous recorder supplied by State of Nebraska, in wooden shelter on south bank of channel

SOUTH PLATTE RIVER AT JULESBURG—Continued

number two, about 500 feet downstream from highway bridge. Tape gage in well is 11.00 feet long.

CHANNEL NO. 3. No recorder.

CHANNEL NO. 4. A 6 inch Stevens Type L automatic recorder in wooden shelter on north bank of channel number four about 500 feet downstream from highway bridge.

OBSERVER:—Arlan Luxa, Julesburg, Colorado.

RECORDS AVAILABLE:—April, 1902, to November 14, 1906; May 12, 1908, to September 30, 1914; January 1, 1923, to September 30, 1934.

SOUTH PLATTE RIVER AT OGALLALA

LOCATION:—On highway bridge in Section 6, Township 13 North, Range 38 West, half a mile south of Ogallala. Established April 7, 1931. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 3210.00 feet above mean sea level.

DRAINAGE AREA:—23,500 square miles.

BENCH MARKS:—No. 1 is chisel mark on pier opposite 6 foot mark of gage. Elevation 6.00 feet.

GAGE:—Enamel scale 0-6.7 attached to 2x6 plank fastened to downstream end of fifth pier from north end of bridge.

RECORDER:—None.

OBSERVER:—Water Commissioner during irrigation season.

RECORDS AVAILABLE:—Miscellaneous measurements, 1924 to 1931. Daily discharge during calendar year 1923; April 7, 1931 to September 30, 1934.

SOUTH PLATTE RIVER AT NORTH PLATTE

LOCATION:—On concrete highway bridge, consisting of 10-50 foot spans, in Section 9, Township 13 North, Range 30 West, $\frac{3}{4}$ of a mile south of North Platte, Nebraska. Established June 1, 1914. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 2800.00 feet above mean sea level.

DRAINAGE AREA:—24,300 square miles.

BENCH MARKS:—No. 1 is standard bronze tablet set in a 4 foot concrete post on the south bank, 35 feet back of the bank and 15 feet downstream from the gage. Elevation 11.65 feet.

SOUTH PLATTE RIVER AT NORTH PLATTE—Continued

GAGE:—To provide for the possibility of the channel changing from one side of the stream to the other, a 16 foot staff gage was placed on each side of the main channel during October, 1934. A Weather Bureau staff gage (0-10 foot enamel scale) was mounted on a 4"x6"x10' timber and bolted with 2½"x10" bolts to the downstream end of the first pier of each bank. (A second 10"x16" was mounted on a 4"x6"x6" timber and bolted to the downstream side of each abutment.)

RECORDER:—None.

OBSERVER:—A. W. Shilling, North Platte, and Water Commissioner during irrigation season.

RECORDS AVAILABLE:—June 1, 1914, to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—2.65 on June 22, 1934.

LOWEST GAGE READING FOR SEASON:—0.10 on August 21, 1934.

PLATTE RIVER AT OVERTON

LOCATION:—Concrete highway bridge consisting of 25 - 35.5 foot spans center to center, on north and south center line through Section 12, Township 8, Range 20 West, 4 miles south of Overton. Established in June, 1918. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 2320.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—490 miles.

DRAINAGE AREA:—58,400 square miles.

BENCH MARKS:—No. 1 is top of concrete guard rail on upstream side at north end of bridge. Elevation 14.28 feet. No. 2 is top of concrete guard rail on downstream side at south end of bridge. Elevation 14.32 feet. No. 3 is cross on curb on upstream side at north end of bridge. Elevation 12.06 feet. No. 4 is two 60d spikes driven horizontally in base of a 6 inch cottonwood tree, 10 feet south and 5 feet east from shelter. Elevation 6.42 feet. Reference point is slot in screw head in face of recorder shelf. Elevation 10.34 feet.

GAGE:—Enamel scale gage 0-6.7 attached to downstream end on first pier from north end of bridge.

RECORDER:—Stevens Type A-27 continuous recorder on south bank of stream, 40 feet downstream from bridge.

OBSERVER:—E. D. Long, Overton.

RECORDS AVAILABLE:—June, 1918 to September 30, 1934, with

PLATTE RIVER AT OVERTON—Continued

the exception of the year 1924.

HIGHEST GAGE READING FOR SEASON:—3.99 on February 1, 1934.

LOWEST GAGE READING FOR SEASON:—0.47 on August 17, 1934.

PLATTE RIVER AT GRAND ISLAND

LOCATION:—Bridge on highway No. 2, in Section 36, Township 11 North, Range 9 West, five miles southeast of Grand Island. Established May 25, 1933. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—About 1840.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—560 miles.

DRAINAGE AREA:—

BENCH MARKS:—No. 1 is standard United States Geological Survey bronze tablet set in upstream end of north abutment. Elevation 13.66 feet. Reference point is slot in screw head in recorder cabinet. Elevation 12.30 feet. Reference point for ground water surface is line on gage. Elevation 13.74 feet.

GAGE:—Chain gage 17.77 feet long on the upstream hand rail of bridge. An electric tape gage is used to read water surface in ground water casing.

RECORDER:—Two Stevens Type A-30 continuous recorders in wooden shelter on north bank of stream, 30 feet downstream. One records stream flow level and the other the ground water level. Installed October 23, 1933.

OBSERVER:—No observer.

RECORDS AVAILABLE:—May 25, 1933 to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—4.42 on January 12, 1934.

LOWEST GAGE READING FOR SEASON:—River dry May 16 to September 30, 1934.

HIGHEST GROUND WATER LEVEL:—4.49 on January 13, 1934.

LOWEST GROUND WATER LEVEL:— -0.24 September 30, 1934.

PLATTE RIVER AT DUNCAN

LOCATION:—Concrete highway bridge consisting of 18 - 50 foot spans, in Section 12, Township 16 North, Range 2 West, one and one-half miles south of Duncan. Established October 25, 1928. Main-

PLATTE RIVER AT DUNCAN—Continued

tained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 1480.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—632 miles.

DRAINAGE AREA:—61,600 square miles.

BENCH MARKS:—No. 1 is top of old engine valve set flush with top of first pier from north end, near upstream point. Elevation 12.80 feet.

GAGE:—Enamel scale 0 - 10 feet fastened to a 4"x6" timber bolted to downstream end of first concrete pier from north end. Elevation of zero of gage is 1478.80 feet above sea level.

RECORDER:—None.

OBSERVER:—Ralph L. Lindley, Duncan, Nebraska.

RECORDS AVAILABLE:—From October, 1928, to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—3.94 on March 5, 1934.

LOWEST GAGE READING FOR SEASON:—0.04 July 14, lowest reported. The river was dry from June 26 to September 30, 1934.

PLATTE RIVER AT ASHLAND

LOCATION:—Half a mile above bridge on highway No. 6 in Section 30, Township 13 North, Range 10 East, at United States Rifle Range, three miles northeast of Ashland. Established September 29, 1933, to replace station maintained at old highway bridge 950 feet downstream. Maintained by Nebraska and the United States Geological Survey under a cooperative agreement.

ELEVATION:—Approximately 1020.00 feet above mean sea level.

DISTANCE FROM PATHFINDER:—719 miles.

DRAINAGE AREA:—83,800 square miles.

BENCH MARKS:—No. 1 is two spikes driven horizontally in blaze in 24 inch cottonwood tree located just back of levee on south bank. The tree is the one nearest the old bridge location on the downstream side. Elevation 8.27 feet. No. 2 is a bronze tablet set in top of concrete pedestal at base of flag pole, located 150 feet upstream and 20 feet in front of shelter. Elevation 10.43 feet. This is a University of Nebraska bench mark. Reference point is slot in screw head in recorder shelf. Elevation 13.25 feet.

PLATTE RIVER AT ASHLAND—Continued

GAGE:—Cantilever chain gage is located 5 feet downstream from shelter. Length of chain 19.66 feet. Elevation of zero of gage is 1020.1 feet above sea level.

RECORDER:—Stevens Type A-30 continuous recorder, installed in standard wooden shelter on south bank of stream, September 29, 1933.

RECORDS AVAILABLE:—August, 1928 to September 30, 1934.

HIGHEST GAGE READING FOR SEASON:—5.91 on January 22, 1934.

LOWEST GAGE READING FOR SEASON:—1.63 on July 27, 29, 1934.

ARIKAREE RIVER NEAR HAIGLER

LOCATION:—In Section 28, Township 1 North, Range 41 West.

DRAINAGE AREA:—2,210 square miles.

BENCH MARKS:—No. 1 is cross in top of concrete wing wall in upstream side of 10 inch cottonwood in group about 40 feet upstream from gage and 20 feet back from west bank, elevation 6.62 feet. It is the first tree group above bridge.

GAGE:—A 2"x4" plank fastened to downstream face of first bent from east end of bridge, 0-1.5 enamel section, 1.5-5.0 graduated by tacks at tenth marks.

OBSERVATIONS:—Made twice daily by David A. Roach.

RECORDS AVAILABLE:—March, 1932, to September 30, 1934.

BAYARD SUGAR FACTORY DRAIN NEAR BAYARD

LOCATION:—West quarter corner of Section 4, Township 20 North, Range 52 West.

BENCH MARKS:—No. 1 is cross in top of concrete wingwall directly above gage, elevation 5.48 feet.

GAGE:—Staff gage consisting of 0-3.3 enamel scale mounted on a 2"x6" plank fastened with two 5/16 lag screws and expanding shields to the west upstream wing wall of the flume over the abandoned Alliance canal siphon.

OBSERVATIONS:—Made twice daily by Alta Fox.

RECORDS AVAILABLE:—October, 1931, to September, 1934.

BIRDWOOD CREEK NEAR HERSHEY

LOCATION:—In Section 2, Township 14 North, Range 33 West.

DRAINAGE AREA:—286 square miles.

BENCH MARKS:—None.

GAGE:—Enamel scale 0-6.7 fastened to west abutment near downstream end.

OBSERVATIONS:—Made twice daily by Lucille Brocktrup.

RECORDS AVAILABLE:—January, 1922, to September, 1934.

BLUE CREEK NEAR LEWELLEN

LOCATION:—North line of Section 30, Township 16 North, Range 42 West.

DRAINAGE AREA:—267 square miles.

BENCH MARKS:—No. 1 is top of 3/8" bolt driven horizontally in 18 inch cottonwood located 12 feet upstream from east end of bridge, and 8 feet east from bank, elevation 4.66 feet. No. 2 is bronze tablet set in concrete, 60 feet east of shelter, elevation 4.28 feet.

GAGE:—Stevens Type E automatic recorder in small standard wooden shelter. Reference point is slot in screw in edge of recorder shelf, elevation 7.31 feet. Outside gage is cantilever chain gage fastened to the upstream side of shelter.

RECORDS AVAILABLE:—January, 1921, to September, 1934.

LITTLE BLUE RIVER AT ENDICOTT

LOCATION:—In Section 5, Township 1 North, Range 3 East.

DRAINAGE AREA:—2,590 square miles.

BENCH MARKS:—No. 1 is two spikes driven horizontally in large cottonwood tree at beginning of east approach, 25 feet south of road, elevation 8.01 feet. No. 2 is bronze tablet set in concrete post 20 feet in front and 5 feet downstream from shelter, elevation 9.34 feet.

GAGE:—Stevens Type E 8 day recorder in standard wooden shelter on west bank, 250 feet downstream from highway bridge. Referred to inside tape gage, reference point for which is slot in screw in recorder shelf, elevation 17.56 feet. Outside gage is chain gage fastened to downstream guard rail of highway bridge. Chain length, 15.18 feet.

RECORDS AVAILABLE:—April, 1929, to September 30, 1934.

BIG BLUE RIVER AT BARNSTON

LOCATION:—In Section 13, Township 1 North, Range 7 East.

DRAINAGE AREA:—4,350 square miles.

BENCH MARKS:—No. 1 is fourth rivet (marked with chisel) from downstream end in cross brace between east cylinder piers, elevation

BIG BLUE RIVER AT BARNSTON—Continued

19.72 feet. No. 2 is top of 3/8 inch bolt driven in downstream side of 20 inch maple on east bank, 60 feet downstream from bridge, and 30 feet back from bank, elevation 19.51 feet. No. 3 is standard U. S. G. S. bronze tablet set in concrete post, 40 feet downstream from rear edge of shelter, elevation 18.47 feet.

GAGE:—Stevens Type A-30 automatic recorder installed in standard wooden shelter on west bank, 200 feet upstream from highway bridge. Referred to inside electric tape gage. Elevation of reference point is 25.00 feet. Outside gage is chain gage fastened to downstream truss of highway bridge. Chain length, 39.84 feet.

RECORDS AVAILABLE:—May, 1932, to September 30, 1934.

ELKHORN RIVER AT NELIGH

LOCATION:—In Section 20, Township 25 North, Range 6 West.

DRAINAGE AREA:—1,740 square miles.

BENCH MARKS:—No. 1 is top of river end of steel sheathing located 25 feet downstream from gage on south bank, elevation 6.98 feet.

GAGE:—Boxed chain gage fastened to 2"x6"x14' plank bolted to downstream handrail of bridge; enamel scale reads from 0 to 10 feet.

OBSERVATIONS:—Made twice daily by J. L. Long.

RECORDS AVAILABLE:—March, 1931, to September 30, 1934.

ELKHORN RIVER AT WATERLOO

LOCATION:—In Section 10, Township 15 North, Range 10 East.

DRAINAGE AREA:—6,390 square miles.

BENCH MARKS:—No. 1 is cross on outer corner of south downstream wing wall, elevation 17.61 feet. No. 2 is standard bronze tablet set in concrete post located 14 feet downstream, and 47 feet south of bridge, along toe of slope of highway grade, elevation 12.57 feet.

GAGE:—Stevens Type A-30 recorder in standard wooden shelter. Reference point is slot in screw in edge of recorder shelf, elevation 15.62 feet. Outside gage is chain gage on bridge used previously. Length 21.96 feet.

RECORDS AVAILABLE:—May, 1911, to July, 1913; August, 1928, to September 30, 1934.

FRENCHMAN RIVER NEAR CHAMPION

LOCATION:—Section 19, Township 6 North, Range 39 West.

DRAINAGE AREA:—1,020 square miles.

BENCH MARKS:—No. 1 is standard bronze tablet set in concrete

FRENCHMAN RIVER NEAR CHAMPION—Continued

post, 28 feet downstream from gage shelter, 25 feet back of north bank, elevation 6.00 feet.

GAGE:—Stevens Type A-30 recorder in small wooden shelter, 100 yards below highway. Outside gage is cantilever chain gage, 5 feet upstream, length 11.71 feet.

RECORDS AVAILABLE:—January, 1924, to September 30, 1934.

FRENCHMAN RIVER NEAR HAMLET

LOCATION:—In Section 19, Township 5 North, Range 34 West.

DRAINAGE AREA:—1,420 square miles.

BENCH MARKS:—No. 1 is 2 nails driven horizontally in downstream pile of second bent from south bank on railroad bridge, 65 feet upstream. Nails 1.4 feet above the ground. Elevation 8.19 feet. No. 2 is standard U. S. G. S. reference tablet in concrete post 30 feet downstream and in line with front edge of recorder shelter on north bank, elevation 7.79 feet. Elevation of gage zero, 2798.43 feet above mean sea level.

GAGE:—Stevens Type A-30 recorder in standard wooden shelter. Referred to inside tape gage, reference point for which is slot in screw in side of recorder shelf, elevation 12.07 feet. Outside gage is enamel scale 0-10, attached to downstream pile bent at south side of bridge.

RECORDS AVAILABLE:—April, 1929, to September 30, 1934.

FRENCHMAN RIVER AT CULBERTSON

LOCATION:—In Section 17, Township 3 North, Range 31 West.

DRAINAGE AREA:—2,800 square miles.

BENCH MARKS:—None.

GAGE:—A 2"x4" plank fastened to downstream pile of third trestle bent out from south bank. Graduated to 1.5 feet by enamel section from 0-5 feet by tacks at tenth marks, and metal house numerals at foot marks.

OBSERVATIONS:—Made twice daily by John Zailer, and O. W. Korell.

RECORDS AVAILABLE:—January, 1922, to September 30, 1934.

GERING DRAIN NEAR GERING

LOCATION:—East Line of Section 6, Township 21 North, Range 54 West.

BENCH MARKS:—No. 1 is head of railroad spike driven horizon-

GERING DRAIN NEAR GERING—Continued

tally in downstream piling of first bent from south end of bridge, elevation 6.03 feet.

GAGE:—Staff gage consisting of 5-1 foot enamel scales fastened to downstream piling of second bent from south end of bridge.

OBSERVATIONS:—Made twice daily by Ruben Funk.

RECORDS AVAILABLE:—January, 1923, to September, 1934.

HORSE CREEK NEAR LYMAN

LOCATION:—In Section 25, Township 23 North, Range 58 West.

DRAINAGE AREA:—1,860 square miles.

BENCH MARKS:—No. 1 is cross on coping at north end of siphon, on center line, elevation 15.38 feet.

GAGE:—Staff consisting of 6-1 foot sections of enamel scale fastened to an 8"x8" piling 5 feet upstream from Station 20, and 15 feet below center line of siphon.

OBSERVATIONS:—Made twice daily by Gladys Phinney.

RECORDS AVAILABLE:—January, 1921, to September 30, 1934.

LODGEPOLE CREEK AT BUSHNELL

LOCATION:—In Section 33, Township 15 North, Range 57 West.

DRAINAGE AREA:—1,090 square miles.

BENCH MARKS:—No. 1 is cross cut in top of north upstream wing wall, elevation 3.79 feet.

GAGE:—Staff gage 0-3.3 fastened on south vertical wall of concrete flume, 3 feet from upstream end of wall.

OBSERVATIONS:—Made twice daily by Walter Frank.

RECORDS AVAILABLE:—January, 1924, to September 30, 1934.

LOUP RIVER AT COLUMBUS

LOCATION:—In Section 29, Township 17 North, Range 1 East.

BENCH MARKS:—No. 1 is file mark in top of steel rivet on bank side of upstream cylinder of south pier of old highway bridge, directly above first butt joint, elevation 8.81 feet. No. 2 is 60d. spike driven vertically in notch cut in root of 24 inch ash tree on south bank, 150 feet directly below south abutment of old bridge. This is the first tree below bridge on south bank. Elevation 6.90 feet. No. 3 is standard bronze tablet set in top of concrete post, located 20 feet in front and 32 feet downstream from shelter, elevation 10.29 feet.

GAGE:—Stevens Type A-30 recorder in standard wooden shelter

LOUP RIVER AT COLUMBUS—Continued

on south bank, 500 yards below highway bridge. Reference point is slot in screw in recorder shelf, elevation 12.55 feet. Outside gage is cantilever chain gage 19.82 feet long, 6 feet downstream.

RECORDS AVAILABLE:—November 22, 1933, to September 30, 1934.

MIDDLE LOUP RIVER AT ST. PAUL

LOCATION:—In Section 10, Township 14 North, Range 10 West.

DRAINAGE AREA:—7,320 square miles.

BENCH MARKS:—No. 1 is cross in outer corner of bed plate on downstream side of north abutment of highway bridge, elevation 13.23 feet. No. 2 is standard bronze plug in top of pipe, located 15 feet northeast of south downstream wing wall, elevation 7.41 feet. No. 3 is standard bronze tablet set in top of concrete post located 48 feet in front of shelter and in line with upstream side, elevation 7.45 feet. Zero of gage is 1778.41 feet above mean sea level.

GAGE:—Stevens Type A-30 recorder in standard wooden shelter on north bank, 300 yards upstream from highway bridge. Reference point is slot in screw in edge of recorder shelf, elevation 11.79 feet. Outside gage is cantilever chain gage 6 feet downstream from shelter.

RECORDS AVAILABLE:—May, 1895, to October, 1897; April to October, 1899; April to November, 1903; August, 1928, to September 30, 1934.

NORTH LOUP RIVER NEAR ST. PAUL

LOCATION:—In Section 22, Township 15 North, Range 10 West.

DRAINAGE AREA:—4,040 square miles.

BENCH MARKS:—No. 1 is 2 spikes driven horizontally in blaze in side of forked tree, which is in a clump of trees 25 feet back from recorder shelter, elevation 6.68 feet. No. 2 is cross filed in head of rivet at north downstream corner of south abutment, elevation 12.42 feet. No. 3 is bronze tablet set in concrete post located 54 feet back of recorder shelter and 5 feet upstream, elevation 5.86 feet.

GAGE:—Stevens Type A-30 recorder in standard wooden shelter. Reference point is slot in screw set in edge of recorder shelf. Elevation 12.08 feet. Outside gage is chain gage on bridge. Chain length 15.05 feet.

RECORDS AVAILABLE:—May, 1895, to October, 1897; April to October, 1899; April to December, 1903; August, 1928, to September, 1934.

NINE MILE DRAIN

LOCATION:—Northwest corner of Section 25, Township 21 North, Range 53 West.

BENCH MARKS:—No. 1 is spike in south side of power line pole near base, 25 feet upstream from bridge, elevation 7.02 feet.

GAGE:—Staff gage consisting of 0-6.7 enamel scale fastened to piling supporting wing wall at upstream end of west abutment.

OBSERVATIONS—Made twice daily by Fred Hardt.

RECORDS AVAILABLE:—January, 1919, to September, 1934.

NIOBRARA RIVER AT DUNLAP

LOCATION:—On Line between Sections 26 and 27, Township 29 North, Range 48 West.

DRAINAGE AREA:—1,550 square miles.

BENCH MARKS:—No. 1 is 60 d. spike driven horizontally in root of fifth willow tree on south bank, 60 feet downstream from bridge, and 30 feet from edge of bank. Spike is on upstream side of tree about 18 inches above the ground, elevation 12.60 feet.

GAGE:—Staff gage (enamel scale 0-6.7) fastened to downstream end of third pile bent from north end.

OBSERVATIONS:—Made twice daily by Mrs. Bina Wegezyn.

RECORDS AVAILABLE:—January, 1924, to September 30, 1934.

OTTER CREEK NEAR LEMOYNE

LOCATION:—In SE $\frac{1}{4}$ of Section 5, Township 15 North, Range 40 West.

DRAINAGE AREA:—12 square miles.

BENCH MARKS:—No. 1 is bronze tablet set in concrete post, 48 feet due north of shelter, elevation 7.99 feet.

GAGE:—Gurley 8 day recorder in small wooden shelter on east bank, 200 yards below ranch house. Reference point in slot in screw in edge of recorder shelf, elevation 6.84 feet. A cantilever chain gage, length 10.35 feet, is located 8 feet downstream.

RECORDS AVAILABLE:—From January, 1922, to June 26, 1934, for station in Section 9, from June to September 30, 1934, in Section 5.

PUMPKIN CREEK NEAR BRIDGEPORT

LOCATION:—On line between Sections 12 and 13, Township 19 North, Range 50 West.

DRAINAGE AREA:—1,080 square miles.

BENCH MARKS:—No. 2 is standard bronze tablet set in concrete

PUMPKIN CREEK NEAR BRIDGEPORT—Continued

post along upstream right of way fence, about 100 feet from east end of bridge, elevation 8.96 feet.

GAGE:—Gurley 8 day recorder in small wooden shelter. Reference point is slot in screw in recorder shelf, elevation 9.75 feet. Staff gage consisting of 0-5 feet enamel scale fastened to downstream piling in first bent from east end of bridge.

RECORDS AVAILABLE:—January, 1922, to September 30, 1934.

RED WILLOW CREEK NEAR BAYARD

LOCATION:—Southwest corner of Section 7, Township 20 North, Range 51 West.

BENCH MARKS:—No. 1 is the heads of 2 spikes driven horizontally in east side at base of stump of 8 inch cottonwood, 50 feet to west and 30 feet downstream from bridge. Elevation 5.50 feet. No. 2 is the head of 3/8 inch lag screw driven horizontally in piling to which gage is fastened, elevation 3.00 feet.

GAGE:—Staff gage consisting of 0-6.7 enamel scale fastened to piling at downstream end of west abutment.

OBSERVATIONS:—Made twice daily by Roy McKee.

RECORDS AVAILABLE:—February, 1932, to September 30, 1934.

**REPUBLICAN RIVER AT COLORADO-NEBRASKA LINE
(North Fork of the Arkansas)**

LOCATION:—In Section 10, Township 1 North, Range 42 West.

DRAINAGE AREA:—395 square miles.

BENCH MARKS:—None.

GAGE:—Staff gage consisting of 0-4 feet enamel scale and tacks at tenth marks from 4 to 5 feet, mounted on 2"x4" post, driven in edge of stream at south bank, 100 feet east of the Colorado-Nebraska Line.

OBSERVATIONS:—Made twice daily by Mrs. T. M. Ashton.

RECORDS AVAILABLE:—March, 1926, to September 30, 1934.

SOUTH BRANCH OF REPUBLICAN RIVER AT BENKELMAN

LOCATION:—Section 19, Township 1 North, Range 37 West.

BENCH MARKS:—None.

GAGE:—Staff gage consisting of 0-3.3 feet enamel scale fastened to the south side of the west piling in the second bent from the north end of the bridge.

OBSERVATIONS:—Made twice daily by Mrs. Miles Jones.

RECORDS AVAILABLE:—January, 1924, to September 30, 1934.

REPUBLICAN RIVER AT MAX

LOCATION:—In Section 32, Township 2 North, Range 36 West.

DRAINAGE AREA:—6,220 square miles.

BENCH MARKS:—No. 1 is two spikes driven horizontally in blaze in cottonwood tree, 10 feet inside fence east of highway, and 100 feet north of bridge, elevation 6.62 feet. No. 2 is two spikes driven horizontally in blaze in cottonwood tree on line with fence east of road, and 60 feet north of bridge, elevation 6.74 feet.

GAGE:—Enamel scale 0-6.7 attached to 2"x6" timber spiked to downstream end of pile bent 100 feet from north end of bridge, elevation of gage zero is 2873.6 feet above mean sea level.

OBSERVATIONS:—Made twice daily by C. E. Scheer.

RECORDS AVAILABLE:—August, 1928, to September 30, 1934.

REPUBLICAN RIVER AT CULBERTSON

LOCATION:—In Section 20, Township 3 North, Range 31 West.

DRAINAGE AREA:—8,790 square miles.

BENCH MARKS:—No. 1 is head of 40 d spike driven vertically in horizontal branch of clump of ash trees located 20 feet downstream from north end of bridge, elevation 3.72 feet.

GAGE:—Staff gage consisting of 0-6.0 feet enamel scale attached to a 2"x6" timber, which is bolted to "I" beam piling at the downstream corner of the north abutment of the bridge.

OBSERVATIONS:—Made twice daily by John Zailer and O. W. Korell.

RECORDS AVAILABLE:—January, 1924, to September 30, 1934.

REPUBLICAN RIVER NEAR BLOOMINGTON

LOCATION:—In Section 8, Township 1 North, Range 15 West.

DRAINAGE AREA:—19,000 square miles.

BENCH MARK:—No. 1 is 2 spikes in side of largest tree in group at north bank, 25 feet back from edge of bank and 125 feet downstream from bridge, elevation 15.23 feet.

GAGE:—Chain gage with 0-10.0 feet enamel scale, bolted to 4"x6" timber fastened to bridge floor at downstream side. Elevation of gage zero is 1822.5 feet above mean sea level.

OBSERVATIONS:—Made twice daily by Willis E. Kahrs.

RECORDS AVAILABLE:—April, 1929, to September 30, 1934.

REPUBLICAN RIVER NEAR HARDY

LOCATION:—Section 6, Township 1 South, Range 5 West.

BENCH MARKS:—No. 1 is standard aluminum plug set in con-

REPUBLICAN RIVER NEAR HARDY—Continued

crete 40 feet upstream from the north abutment, and 7 feet back of the north bank, elevation 12.00 feet.

GAGE:—Stevens Type A-30 recorder in wooden shelter and corrugated iron well fastened to downstream end of first pier from north bank. Elevation of reference point is 21.11 feet. Outside gage is chain gage with enamel scale attached to timber bolted to downstream handrail.

RECORDS AVAILABLE:—May, 1932, to September 30, 1934.

SHEEP CREEK NEAR MORRILL

LOCATION:—West quarter corner of Section 16, Township 23 North, Range 57 West.

BENCH MARKS:—No. 1 is point marked with paint on under side of steel girder directly above gage, elevation 6.70 feet.

GAGE:—Staff gage consisting of 0-6.7 enamel scale mounted on a 2"x6" plank driven in bed of stream at east bank directly underneath downstream side of highway bridge.

OBSERVATIONS:—Made twice daily by Manford Travis.

RECORDS AVAILABLE:—April, 1919, to September 30, 1934.

WHITE RIVER NEAR CHADRON

LOCATION:—In Section 18, Township 33 North, Range 49 West.

BENCH MARKS:—No. 1 is 60 d. spike driven vertically in root of 24 inch cottonwood tree on west bank, 15 feet from edge of bank, and 20 feet upstream from bridge, elevation, 17.72 feet.

GAGE:—Chain gage attached to 2"x6" timber fastened to upstream hand rail. Chain length to regular marker, 24.10 feet; to high water marker, 14.10 feet.

OBSERVATIONS:—Made twice daily by T. A. Schuhmacher.

RECORDS AVAILABLE:—April, 1924, to September 30, 1934.

WHITE RIVER AT CRAWFORD

LOCATION:—Section 9, Township 31 North, Range 52 West.

DRAINAGE AREA:—295 square miles.

BENCH MARKS:—No. 1 is cross chiseled in outer corner of downstream end of bridge seat in east abutment. Elevation, 15.08 feet.

GAGE:—Standard boxed chain gage with 0-10.0 feet enamel scale bolted to downstream hand rail. Chain length 23.65 feet.

OBSERVATIONS:—Made twice daily by Howard C. Dallam.

RECORDS AVAILABLE:—January, 1924, to December, 1928, and February, 1931, to September 30, 1934.

WINTERS CREEK NEAR SCOTTSBLUFF

LOCATION:—South quarter corner of Section 19, Township 22 North, Range 54 West.

BENCH MARKS:—No. 1 is cross chiseled in top of concrete head-wall above gage, elevation 5.89 feet. No. 2 is cross chiseled in concrete in upstream corner of west abutment of highway bridge, elevation 6.77 feet.

GAGE:—Staff gage consisting of 0-3.3 enamel scale fastened to 2"x6" plank attached to the north wall of a concrete spillway structure on the west bank of the creek about 55 feet above the center line of the highway.

OBSERVATIONS:—Made twice daily by Wesley Lackey.

RECORDS AVAILABLE:—January, 1919, to September 30, 1934.

SUMMARY OF ANNUAL DISCHARGE

The following table shows the mean annual discharge at selected gaging stations in different sections of the state, and the percentages that the 1933 and 1934 records bear to the mean for each station:

GAGING STATION	*MEAN ANNUAL DISCHARGE IN ACRE-FEET	PERCENTAGE OF MEAN ANNUAL DIS- CHARGE	NUMBER OF YEARS RECORDED
	1933	1934	
North Platte River at Wyoming-Nebraska Line.....	674,600	116	54
North Platte River at Mitchell.....	1,098,400	61	32
North Platte River at Bridgeport.....	1,537,200	74	43
Frenchman Creek near Hamlet.....	71,440	103	107
Republican River near Bloomington.....	417,600	100	72
North Platte River at North Platte.....	1,874,000	85	55
Niebrara River near Spencer.....	877,600	100	83
Loup River at Columbus.....	1,812,000	85
Elkhorn River at Waterloo.....	574,500	81	58
Little Blue River near Endicott.....	115,500	97	70
Platte River near Ashland.....	4,053,000	85	61

* Mean includes 1934

During 1933, the discharge of streams in the western part of the state was generally above the mean for the years of record, while in the eastern part, it was below the mean. The average for the state as a whole was about normal.

In 1934, however, conditions were very different, as the streams in all parts of the state, with one recorded exception were below normal, the percentage of the mean being as low as 32 per cent at Mitchell.

Part I—BUREAU OF ROADS AND BRIDGES

[Note:—THE TWENTIETH BIENNIAL REPORT OF THE DEPARTMENT OF ROADS AND IRRIGATION is composed of two parts: Part I, THE REPORT OF THE BUREAU OF ROADS AND BRIDGES, and Part II, THE REPORT OF THE BUREAU OF IRRIGATION, WATER POWER AND DRAINAGE. This report has been bound and issued in three different volumes: (a) The complete report, consisting of both Part I and Part II. (b) Part I alone, consisting of pages 1-196. (c) Part II alone, consisting of all pages following 196.

In those copies of Part II alone, this index for Part I is included although the remainder of Part I (pages 1-196) has been omitted.]

A

Accounts and records, 116-18

Aggregates used in concrete, 52-54

Appropriations for biennium, 116

Automobile registration, SEE Motor vehicle registration

Average contract prices, SEE Contract unit prices

B

Beautification, roadside, 40, 56

Borings, log of test for: Auburn viaduct, 104; Emerald viaduct, 106; Hastings subway, 112; Oreapolis viaduct, 110; Saddle Creek grade separation in Omaha, 107; Sheridan Boulevard viaduct in Lincoln, 113

—log of test for bridge over: the Blue near Hebron, 109; the Elkhorn near Norfolk, 111; the Elkhorn near Waterloo, 114; the Loup, Middle, near Cairo, 115; the Nemaha near Auburn, 105; Salt Creek near Lincoln, 103; Tekamah Creek in Tekamah, 108

Bridges: city, 84-86; costs, lengths, Etc., tables showing, 81-83; design, trends in, 80;

general discussion of, 80-83; river, 86-89; State-aid, 89-90

—constructed over: the Blue, little, near Hebron, 87; the Elkhorn in Douglas County, 86; the Elkhorn in Madison County, 87; the Loup near Cairo, 88; the Nemaha north of Auburn, 89; the Platte, South, at Roscoe, 89; the Platte, South, at Brule, 89; Salt Creek west of Lincoln, 85; Tekamah Creek in Tekamah, 84

Bridge Design, Report of the Division of, 80-115

C

Civil Works Administration (CWA), activities in District: No. 1, 27; No. 3, 33; No. 4, 35; No. 5, 36; No. 6, 38; No. 7, 39; No. 8, 40

—activities in maintenance, 59; expenditures under, 2, 192-94; number of people employed under, 2, 189; program of and regulations by, 187, 189; projects under, 189, 191; regulations governing expenditures, 191

Clerical and Records, Report of the Division of, 116-18

INDEX

- Compensation, SEE Workmen's compensation
- Construction (SEE ALSO Bridges): by direct labor, 28, 32, 35, 46; in municipalities, 28, 30, 35, 36, 40, 54-56; obligations by years, 18; regulations imposed by Federal government relative to employment of labor, hours of work, Etc., 43-46; Report of the Division of, 43-57; summary of, 3
- in District: No. 1, 28; No. 2, 29; No. 3, 32; No. 4, 34; No. 5, 35; No. 6, 37; No. 7, 38; No. 8, 40
- Contract unit prices: for 1917-26, 153, 154; for 1927-28, 155; for 1929-30, 156, 157; for 1931, 158, 159; for 1932, 160-62; for 1933, 162-64; for 1934, 165-67
- for bridge items: 1925-30, 168; 1931, 169; 1932, 170; 1933, 171; 1934, 172
- Contractors to whom contracts were awarded, list of, 173-76
- Contracts awarded, tables of estimated cost of work: for year of 1933, 133-42; from January 1, 1934 to October 31, 1934, 143-52
- Costs, SEE Maintenance, SEE ALSO Contract unit prices
- County apportionment ratios, 24, 25
- D
- Direct labor, unit costs on, 47
- District Engineers: duties of, 27
- report of in District: No. 1, 27-29; No. 2, 29-32; No. 3, 32,
- 33; No. 4, 33-35; No. 5, 35, 36; No. 6, 37, 38; No. 7, 38, 39; No. 8, 39-41.
- District map, 26
- Dodge Street, Omaha, improvement of, 30, 55
- E
- Electrical arc welding, use of, 85
- Employees of Department, table showing number of by months, 6, 7
- Equipment, maintenance, inventory of, 60
- Executives of Department, list of and length of service, 5
- F
- Federal appropriations, summary of all, 18
- Federal Emergency Relief Administration (FERA), number of employees under, 2, 193, 195
- Federal work relief program, highway improvement under, 187-95
- Fees, SEE Highway funds
- Financial responsibility law applying to drivers of motor vehicles, 179
- Funds, SEE Highway funds
- G
- Gasoline tax, table of receipts by years, 19-21
- Grade separations, SEE Subways
ALSO SEE Viaducts
- Gravel, sand, 52; (SEE ALSO Maintenance)
- H
- Hastings Subway, 34
- Hand labor, 44-46

INDEX

Highway funds: Federal appropriations, 2, 18; gasoline tax, 2, 19-21; legislative appropriations, 22, 23; registration fees, motor vehicle, 2, 21, 180-86

Highway mileage: construction by years, table of, 14; marked and maintained, 12; origin of, 11; total when completed, 11

Highway system: Federal-aid, map of, 17; statutory, map of, 16; work completed, Etc., map of, 15

J

Joints in pavement, 53

L

Labor, selection of, hours of work, minimum wages, Etc., 43-47

Law enforcement, highway, 74

Liability claims, 117, 118

License, operator's, 178

M

Maintenance: annual costs, table of, 69; bituminous mat, 65; costs, discussion of, 67; costs by districts, table of, 73; costs, entire system, graph showing distribution of, 72; costs, gravel, graph showing analysis of, 70; costs, gravel, graph showing distribution of, 71; costs per mile by type, table of, 69; CWA activities in, 59; drought, effect on, 61; equipment, inventory of, 60; facts not generally known, 75; gravel, graph showing mileage of, 70; law enforcement, highway, 74; organization and acti-

vities of Division, 59; report of Division of, 59-76; road magnet, 65; signs, 64; snow removal, 63; supplies, method of purchase, 73; traffic officer's activities, report of, 75; traffic census, 65

—in District: No. 1, 27, 28; No. 2, 31; No. 3, 33; No. 5, 36; No. 6, 38; No. 7, 39; No. 8, 40

Maps and plans: duties of Division of, 77; engineering duties in Division of, and correlation of work of engineers in field and in office, 78, 79; for municipal projects, 77; report of Division of, 77-79

Mileage, highway, SEE Highway mileage

Motor vehicle operator's license, 178

Motor vehicle registration: annual report for 1932, 180-83; annual report for 1933, 184-86; annual, table showing totals, 177; fees, table showing total annual, 21; organization and history of Division of, 177; records kept by Division of, 178; report of Division of, 177-86

Municipal projects, 28, 30, 35, 36, 40, 54-56, 84-86

O

"O" Street, Lincoln, improvement of, 28, 56

Oiled roads, 47, 49

Operator's license, 178

Organization of Department, chart showing, 4

Overpasses, SEE Viaducts

INDEX

P

Pavement: cracks in, 53; design of, 53; fills for, construction of, 51; joints constructed in, 53; reinforcement in, 53; riding qualities of, 51; sand-gravel aggregate, used in, 52, 53; strength of, increase in, 54; supervision of construction of, 50, 51

Precipitation, 61-63

R

Rainfall, SEE Precipitation

Registration, SEE Motor vehicle registration

Reinforcement in pavements, 53

Research (SEE ALSO Tests), oil mat north of Havelock, 28, 29

Right of way: expenditures for, table of, 131, 132; report of Division of, 129-32

Road magnet, 65

Roads, Federal feeder, 3, 12, 13

Roadside improvement, 40, 56

S

Sand gravel, in pavement, 52

Signals, traffic: on "O" Street in Lincoln, 28, 56; on Dodge Street in Omaha, 30, 56; in Fremont, 32

Snow removal, 63

State institutions, Etc., improvement of roads connecting with highways, 22, 23

Subways: Saddle Creek in Omaha, 84; in Hastings, 85

Supplies, method of purchase, 73

T

Tests: classification of, table, 123,

124; employment of student help in making, 119; equipment for, new, 126; functions of Division of, 120; importance of, 122; increase in number of, 122-25; methods of making, 121; needs of Division of and recommendations for future, 3, 124, 126; number of, 3, 123-25; organization of Division of, 119, 120; reports supplied to whom, 122; research in connection with, 127, 128; sampling for, 121, 122; to show merits of competitive products, 122

Traffic flow, 65-67

Traffic officers, report of activities of, 75

U

Underpasses, SEE Subways

Unemployment, relief of, 2; (SEE ALSO Civil Works Administration; Direct labor; Federal Emergency Relief Administration; Federal work relief program; AND Labor, selection of, hours of work, Etc.)
