

DRAFT REPORT ON THE DEPLETIONS AND MITIGATIONS (ACCRETIONS) FROM 2020 PERMITTED ACTIVITIES FOR CENTRAL PLATTE, NORTH PLATTE, SOUTH PLATTE, TRI-BASIN, AND TWIN PLATTE NATURAL RESOURCES DISTRICTS FOR THE 2021 BASIN-WIDE MEETING

I. INTRODUCTION

This report is to satisfy, in part, the tracking and reporting requirements as described in Chapter 10.7, the Monitoring and Evaluation section of the Central Platte, North Platte, South Platte, Tri-Basin, and Twin Platte Natural Resources Districts (Platte Basin NRDs) second increment integrated management plans (IMPs).

For the Central Platte NRD second increment IMP, Chapter 10.7.2, paragraph III states:

(2) The reports from the CPNRD and the NeDNR should include information on the location, amount, and timing of the depletions caused by each permitted new or expanded water use, as well as the associated offset and the location, amount and timing of the offset's accretions to the river. The depletions and/or the accretions should be reported for each year throughout the ten-year increment.

Each of the five Platte Basin NRD IMPs requires that the Department and the NRDs annually track and report new or expanded water use activities. These new or expanded uses are then evaluated along with any offsets to estimate the location, amount, and timing of impacts to the river and to aid in the annual assessment of the progress being made toward achieving the goals and objectives of the IMP for the second 10-year increment, as required by the IMPs. The Department reported on the accretions and depletions due to their new or expanded permitted activities during 2019 in their 2020 annual report. The accretion and depletion analysis of the NRD issued permits is reported in this document. For details on the permitting activities of each NRD, refer to their individual reports on new or expanded permit activities for the 2019 calendar year.

This will be the first report on depletions and mitigations from permitted activities for the second increment of the IMPs.

1. Analysis of NRD 2020 permitted activities.

Table 1 shows the depletions, mitigations (accretions), and net effect of the 2020 permitted new or expanded uses reported by each of the five NRDs through the remainder of the second increment of the IMPs (which ends in 2029), and 1 year into the third increment, as well. A positive value in Table 1 indicates that the accretive effect of the mitigation activities exceeded the depletive effect of the new or expanded permitted uses. Effects to the river were estimated for each permitted action representing a new consumptive

REPORT ON THE DEPLETIONS AND MITIGATIONS (ACCRETIONS) FROM 2020 PERMITTED ACTIVITIES

use of water and the corresponding mitigation for each new use. For each permitted action evaluated, there was a new use initiated and an existing use retired. Some of the permits listed in the individual NRD reports are not for new or expanded consumptive uses of water and are therefore not included in the analysis of depletions. The number of permits used to calculate depletions and accretions to the river in each NRD is shown at the top of Table 1.

While NeDNR is working to update the methodology to be consistent with the models used in the 2019 Robust Review, that work has not been completed and the analysis presented here is based upon the methodology and tools of the first increment IMP. We anticipate that the methodology will be updated prior to the end of this year and at that time we will update this analysis. The depletion and accretion analysis was performed following the guidance document developed by the technical committee for the Platte Basin Habitat Enhancement Project. In general, for actions where the new and retired uses were a change in agricultural land use, the difference in consumptive use was estimated based on land use data provided with the permit information, or on land use conversions typical of the area (i.e. irrigated corn to dryland corn, or vice versa) if specific data was not available. The change in consumptive use for other types of uses, such as new industrial uses, was estimated based upon available data. The annual effect to the river from each individual permitted action (new/expanded uses or mitigations) was estimated using an annual depletion percentage series developed using the Hunt (1999)¹ equation and average hydraulic characteristics taken from the original COHYST data as developed by the technical committee. The guidance document for the annual calculations, *Basin-wide Technical Committee Guidance Document – Procedures for Annual Accounting Review and Robust Review to Assist Integrated Management Planning and Facilitate Reporting to the Platte River Recovery and Implementation Program*, can be found on the Department's website at: <https://dnr.nebraska.gov/sites/dnr.nebraska.gov/files/doc/water-planning/upper-platte/other/basin-wide-technical-committee-guidance20120814.pdf>.
